

Phone exchange gets green light

by Donald Kennett

AT&T's most advanced public telephone exchange is to go into production for the world market on the first day of 1984. A joint venture with Philips, which it has been preparing since last year, is the vehicle for its big push into international markets. The venture was clinched by the signing of the basic part of the agreement between the two companies late last month.

The venture, yet to be named, will be based in Holland, staffed mostly by Philips' people and managed jointly by both parents.

Over 5,000 are expected to be employed in the new company, but Philips said that this would not necessarily create new vacancies in the parent company, since their activities would transfer too.

Philips has been developing its own digital public exchange, the PRX-D, for some years. The first went into service in West Germany this year. Development of parts of this system will continue, despite the fact that the new venture's activities will centre on AT&T's 5-

MORE than 675,000 of AT&T's unionised workers took their last opportunity to go on strike together last weekend. They were dissatisfied with the pay and conditions with which they would face the divestiture by AT&T of its 22 operating companies early next year, believing that it could cause the erosion of their jobs.

In the UK, the British Telecom Union Committee is worried about similar effects arising from the government's plan to privatise BT. But AT&T's workforce is more than two-and-a-half times the size. It is equivalent to about a quarter of the UK's unemployed.

ESS (Number Five Electronic Switching System), which is the first of the company has developed from the outset to meet international as well as US standards.

It can handle from 1,000 to 100,000 lines and the first went into service in the US late last year. The joint venture's first product will be called the 5-ESS/PRX, and

it will use the Philips' technology, particularly in interfacing to existing public networks and in accommodating the requirements of different PTTs. Philips executives are already in the early stages of discussions with the Dutch PTT about a sale.

Philips will also transfer its transmission systems activities to the joint venture, although AT&T's main interest in the deal is to gain access to Philips' worldwide marketing network. AT&T has been precluded until recently from operating internationally and it has just 14 small sales offices outside the US.

A spokesman for AT&T International said: "They are putting up plant and people and we are putting up money."

Philips Telecommunications currently employs 19,000. The parts that will not be transferred to the joint venture are the business (private) communications systems, including PABXs, mobile systems, traffic control and home communications systems - which are under development.

OSBORNE... "Some summer softening."

Osborne is close to shutdown

by Kevin Cahill
OSBORNE Computers, one of the most dramatic US venture start-ups of recent times, is facing virtual closure as its East coast factory shuts and workers are laid off at head office.

Osborne is the brainchild of former computer journalist Adam Osborne, a UK expatriate living in California, and was once forecast to make \$100 million in first year sales of its portable computer, the Osborne 1.

Instead, the company ran into serious cashflow problems following a failure to go public and raise cash in the spring.

The cashflow problem was aggravated by a massive slump in sales between January and June, from 27,000 units a month to just 2,000.

Osborne, quoted in the *Wall Street Journal*, said that the company was seeing "some summer softening in orders".

The quote hardly explains why Osborne suddenly shut its plant in Monmouth Junction, New Jersey, last week with the loss of 100 jobs, or maybe 200 (the company was not quite sure how many employees were there).

Within days of that closure, and having dropped the price of the Osborne 1 from \$1,995 to \$1,295, the company announced it was laying off 203 people at its head office plant in California.

This move reduced the workforce from over 700 to 500. The prime cause of the trouble appears to have been mistiming of the market entry of the Executive 1, the portable successor to the Osborne 1.

The Executive, for which Osborne refuses to give sales figures, virtually destroyed the Osborne 1 market overnight, and the company's \$700 price cut is a belated response to what has been happening in the market place for months.

Boots bid for home market

by Caroline Burgess
SPECIALIST computer centres are to be set up in 32 branches of Boots in a drive to make it the largest home computer retailer in the UK.

Boots aims to increase turnover on micros from £20 million to £30 million and hopes for a 10% share of the market by the end of the year. The home computer industry is growing rapidly with sales of six million units this year estimated.

About 250 of Boots' 1,000 outlets will stock home computers. All their staff will be given special training and computer consultants will be appointed to the 32 big branches.

Sinclair Spectrum, Dragon and Commodore are among the main which Boots markets, and up to 10 branches will offer the BBC micro. All branches will stock at least two models.

Boots is also looking at the possibility of selling the Acorn Electron.

W. H. Smith is at present the largest home computer retailer.

Micro maker hits trouble

MIDDLESEX-BASED microcomputer manufacturer Information and Technology Computer Services, formed only two years ago, is in financial trouble.

It has lost 28 of its 29 staff, and its sister company, ITCS Ltd, has lost about five staff, including its marketing and technical director.

Information and Technology Computer Services manufactures the Zita P Portable microcomputer and the Alpha micro.

Micro giants prepare for price war

by Claire Gooding
THE microsoftware giants are shaping up for a price war in which the cost of user-friendly computing could fall dramatically.

Digital Research, the originator of CP/M, is wooing major manufacturers with VIP, a cheap and cheerful version of the "window" technique which could sell to the mass market for as little as £25.

Up to now the window technique has only been available in high-priced systems such as Apple's Lisa and Xerox's Star workstation.

Digital Research is bringing the idea to the lower end of the market, where users of single-user systems running floppy discs and less than 256K will be able to benefit from the "windows", as well as being able to control the cursor through a "mouse".

Both techniques are notoriously power-hungry and have only been available to users who can afford to look higher up the market at hard disc systems.

Digital Research itself is uncharacteristically quiet about VIP, the Visual Information Processor. The system is intended to be totally portable, separating the applica-

tions from the hardware on which they run.

Few have seen the system in action, but it is said to sit underneath the planned Monarch applications environment creating a video interface which handles the various processes and displays them on the screen simultaneously without interrupting processing.

British manufacturer Acorn and giant Commodore are among the companies thought to be interested in supplying the cheap window system. Both admitted that they were looking at products and talking to Digital Research, but

Leader Comment - page 11

were at pains to make it clear that no commitment was made.

"It's a corporate policy that as from three weeks ago we don't talk about products which don't exist," said Commodore marketing manager John Baxter. "I've seen something running but that's all I'm saying."

Adoption of VIP would, however, fit in with the avowed intent of Commodore to become a software company selling user-friendly software through third parties.

Commodore is thought to have

embarrassed Digital Research by putting software called "Magic Desk" on show at Comdex. According to observers, the software was remarkably similar to the VIP and Monarch systems which Digital Research has been trying to keep under wraps.

Digital Research has put its shirt on the "concurrent" approach, recently endorsed by IBM for use on the Personal Computer. Rival firm Microsoft, whose MS-DOS operating system is used as the native operating mode for the PC, is now scurrying down the multi-tasking route and is planning to introduce "window" facilities into the third release of MS-DOS.

Microsoft's attitude is that Digital Research is planning a massive loss-leader if the rumours that it will licence VIP to manufacturers for as little as \$10 are true. Certainly the enterprise would take Digital Research into unknown territory, with all the problems of mass distribution and support.

However if manufacturers can be persuaded that the video interface route is a profitable one, Digital Research could be on the way to regaining its dominant position in the microsoftware industry.

ICL unions threaten overtime

by George Black
ICL's recent return to profit is threatened by a nationwide escalation of the pay dispute next week.

The negotiating committee of the four unions involved, which represent 60% of the firm's staff, said they would be recommending rejection of the management's improved offer.

ICL increased its offer of 3 1/4% on basic pay coupled with 3 1/4% on merit bonus to 4% on basic and 3% on merit.

The unions had previously rejected the offer because they said the proportion of the money included in the bonus was too high.

A one-day strike on July 28 against the management's "intransigence" was supported by between 2,000 and 2,500 workers after the first official offer had been turned down on a 5-1 vote.

A national overtime ban is one of the options the union leaders will be considering if their members accept the recommendation to reject the latest offer next Monday.

Brian King, of TASS, the engineering union AUBW's technical section, said an overtime ban might be regarded as inequitable by some members so alternative courses were being looked at.

He described the improvement to 4% as "just a question of shifting money from one pocket to the other".

Overtime bans have been operated at the firm's Ashton-under-Lyne (Manchester), Letchworth (Herts) and Kildesgrove (Stoke-on-Trent) plants, involving 500-1,000 workers. King said the stoppages were occurring spontaneously because members were disgruntled with the company's position.

ICL said its latest move allowed "a little leeway" for local salary adjustments. The pay review affects 12,000 staff.

BAILEY... "All sorts of problems."

Union steps up action to hit Mercury owners

by Nuala Moran
THE Post Office Engineering Union (POEU) has stepped up its industrial action against the three companies which own Mercury, the private telephone network.

Branches in London were issued with instructions to refuse to work on all installation and maintenance work on telephone and data transmission equipment at buildings owned or occupied by BP, Barclays Bank and Cable and Wireless, starting from last Monday.

The buildings affected are BP's headquarters, Britannia House at Moor Lane in the City, Barclays' headquarters at Lombard Street together with its computer centre in Tottenham Court Road, and all of Cable and Wireless' four London offices.

A spokeswoman for the POEU said the idea was to hit the owners of Mercury rather than other customers of BT.

Mercury sales director Stuart Bailey said he was reluctant to comment on an issue that was affecting Mercury's parents rather than the company itself.

Sandy Skinner, Mercury's marketing communications manager, added: "We have an absolute unequivocal assurance from the shareholders that this doesn't affect their investments."

There are still 15 union members on strike and three suspended, following the POEU's last spate of industrial action. This took place in June as a protest against BT management making a connection at Mercury's headquarters in Longacre. These members are receiving the equivalent of full pay from the union.

DEC loses two more top managers

DIGITAL Equipment has lost two more high-level managers. Michael Dillon, ex-marketing manager for DEC's personal computer line and the man responsible for the sales of those products, has left DEC to join another computer firm in nearby Lowell, Massachusetts.

Ulf Fagerquist, who had been heavily involved with hardware and software development on the Decsystem 10 and 20 product lines, has left to join a fairly new firm in New York.

The departures follow by several weeks the departure of Gordon Bell, long-time vice-president of engineering for DEC.

National's first

NATIONAL Advanced Systems made the first installation in Europe of its 7380 Disc Storage Subsystem; its direct rival to the IBM 3380, this month. The installation, at Unilever Computer Services, is part of an equipment evaluation procedure by Unilever.

Intertec sackings

INTERTEC Data Systems, the Californian manufacturer of the Superbrain eight-bit microcomputer, is to fire 30% of its production staff. The company is in the interim phase between slowing production of the Superbrain and the launch of its new micro next January.

IBM case goes on

IBM last week kept the fires burning in its civil case against Hitachi and Matsushita. The company is to fire 30% of its production staff. The company is in the interim phase between slowing production of the Superbrain and the launch of its new micro next January.

Top brain quits DEC for Apollo

by George Black

ANOTHER top executive has left Digital Equipment Corp, as the leading US mini manufacturer prepares for a huge morale-boosting sales conference in Boston.

Latest to leave is corporate planning vice-president, Larry Portner, who is going to up-and-coming Massachusetts neighbour Apollo Computer after 19 years with DEC.

Portner said he was "interested in the excitement of a small company and the ability to get things done quickly, a place where there is still entrepreneurial drive".

DEC had undergone a major structural change in the last year, he said, but that had not been an issue for him, as he had been thinking of a move before that.

Only two weeks ago engineering vice-president and Vax mastermind Gordon Bell left to join another new firm in the same area, Encore, led by former Prime president Ken Fisher and Data General

founder Henry Burkhardt.

Apollo, which predicts a jump in turnover to between \$70 and \$80 million this year, is crowing at the capture of Portner, who was DEC's product planning brain. He has taken up the post of research and development vice-president at Apollo, alongside Michael Greata and David Nelson.

DEC, meanwhile, is gathering 7,000 staff from around the world to its first sales symposium to discuss strategy for the new fiscal year.

The week-long event, to be addressed by president Ken Olsen, is spiced to a DEC trade show at Boston city auditorium beginning on August 22. Up to 1,000 European delegates have been speculating what Olsen will reveal about the restructuring of the management team after recent departures, as well as moves to strengthen communications with the men in the field.

DEC's System 10 and System 20

PORTNER... Resigned.

users still wait for a response on upgrading their mainframes. The firm promises an answer "in the next few days". The Vax-on-a-chip project, which it has not yet officially announced, is rumoured to be running behind schedule.

Apollo has just announced first quarter income of \$17.6 million to the end of June, with profits of \$3.8 million. Last year, despite going public "over the counter", it made only \$300,000 profit out of \$18 million turnover, mainly due to heavy factory investments.

CDC produces Cray rival in battle of the giants

by Kevin Cahill
CONTROL DATA Corp, until last October the only rival to Cray Research true supercomputers, has belatedly announced a successor to the Cyber 205, and a challenge to the Cray XMP, or Cray 2.

The Cyber 205 has a working throughput about equivalent to the mid-range speed quoted by Cray for the Cray 1, and the XMP.

The Cray 1 peaks at 1,000 million floating point operations per second (flops), but runs in work environments at between 140 and 200 Mflops. A floating point operation is the computer's equivalent of a simple decimal addition sum.

The XMP, which is the compatible successor to the Cray 1, peaks at 2,000 but is quoted by Cray Research at 200 to 400 Mflops in a working environment. The 205 is quoted by CDC as running at 400 Mflops. This is just behind the working rate of the Cray 2 which can peak at 10 times that speed, but runs at 400 to 600 Mflops.

The first Cray 2 is due for delivery to an unnamed customer in the US by the end of this year.

The 2XX, as the successor to the Cyber 205 is called, is not due until 1987 but has a peak Mflop rating of 10,000. In a working environment this is expected to mean 1,000 to 2,000 Mflops.

The CDC 2XX represents a step down the multiprocessor route currently being followed by many computer manufacturers, and like the Mflop rates, the 2XX which combines eight processors into one CPU.

Normally, there is a substantial loss of effective speed as the number of processors in a configuration grows, but CDC says that by 1988 advances in software will make parallel, multiprocessor architectures considerably faster.

They will have to do so to make the fivefold increase in speed which CDC anticipates will have been achieved in each of the eight Von Neumann processors which make up the 2XX.

The 2XX will be based on MOS gate arrays with about 20,000 in each array, and will be cooled by liquid nitrogen, making the logistics of the machine slightly cumbersome.

The predicted gate density is also half that currently achieved by Dr Gene Amshel in his new Trilogy chip, which is now in preliminary production and which will form the heart of the Trilogy mainframe, due in 1985.

By sticking with CMOS, CDC has avoided the risks, but also the rewards, of going down the increasingly fashionable gallium arsenide route.

Do your staff use FORTRAN?

It's great for arithmetic and logic - but not so good with data. Add database facilities and it would be ideal.

Use RAPPORT with FORTRAN because it's

RELATIONAL - that means easy to understand and use

RELIABLE - thoroughly proven and fully tested

SECURE - recovery and data security provided without programming

BRITISH - support and expertise are here

COST-EFFECTIVE - programs can be developed fast with RAPIDE (the rapid development language) or coded in FORTRAN with a unique database interface.

For further information and details of our seminars contact Mandy Tolli on 01-637 8111.

BURY... Holding hands with first-time users.

Micro Solutions follows the Kentucky Fried approach

by Claire Gooding
FIRST was Kentucky Fried Chicken, now comes Micro Solutions. The small consultancy based in Surrey has hit on so successful a formula for helping first-time computer users that it intends to franchise the idea and set up hand-holding operations all over the country.

For some time Micro Solutions has been offering advice and help to first-time users, particularly of the popular packages like Wordstar. Its services include the training and guidance of users — charged at £150 a day — and the

caretaking of all the "technicalities" such as the creation and safe-keeping of backup discs. "All these things are very simple to people who are within the industry, but to first-time users they are great mysteries, and they are only too pleased to find someone to help them out," explained the company's founder, Mark Bury. The company has grown so fast, based on business from within a 20-mile radius of its base in Thame, Oxfordshire, that Bury is convinced that similar operations elsewhere will take off with equal ease.

Wordplex offers Planet to users

by Caroline Burgess
WORDPLEX will now offer Planet local area network facilities with its range of office computing systems under an agreement with Racal-Milgo.

Roger Winder, Wordplex marketing manager, said the deal would allow Wordplex "to offer its customers a very powerful networking capability that greatly enhances our office systems".

Under the agreement, signed this month, Racal will supply Wordplex with its Planet LAN. Racal sees the joint venture as a way of increasing sales, but it will also be able to market the product itself.

Wordplex's existing range of products includes the 80-3 and the 80-4. They are both multipurpose word processors that run Wordplex's own operating system, Gemini. Gemini allows the user to run two applications at the same time.

"The Gemini facility of dual ground working is, of course, ideal for taking advantage of Planet's communications ability," said Winder.

"We believe it to be a highly flexible way of providing communications between work stations and shared peripherals and re-

sources." Wordplex, based in Reading, is the sales and marketing branch of Wordplex International. It recorded a UK turnover of £14.9 million last year and is forecasting £18 million for this year. At present it has 4,500 systems installed in the UK and employs over 200 people.

Planet LAN was launched by Racal-Milgo just over a year ago. It is a token passing ring network, offering a distance of 250 metres between terminals. There are more than 30 systems installed.

WINDER... "Gemini is ideal."

Lawsuits liven new voice mail market

by Donald Kennett

LAWSUITS are livening up the barely established voice mail systems market, which is expected to grow to £10 million by 1985 in the UK and \$2 billion in the US.

In the UK, Plessey is integrating a voice mail system — from Commterm in the US — into its IDX private telephone exchange ready for a market launch at the end of September.

Meanwhile in the US, Commterm has become the first victim of the attempts of another company, Texas-based VMX, to perpetuate its current domination of the market by suing its rivals. Plessey's patents manager for private telecommunications, Chris Goodman, said: "Bell described its LA voice storage system at the International Switching Symposium in Paris prior to the VMX patent application and this was cited by the patent examiner, so it is puzzling how the application got through."

Plessey's system will cost between £60,000 and £95,000 to support up to 1,000 mailboxes, giving a price per mailbox of £100 to £150. Marketing manager Robert Harrison said that smaller systems were likely to be developed by about 1985 at about the same price per mailbox. "The larger market is always at the smaller end," he said.

Communications consultant Marc Rudov, of the US market research company Venture Development, says there are 20 suppliers in this as yet undeveloped market.

"VMX really started the whole industry," he said, and it currently boasts of 20 of the 50 US companies using voice mail as its customers.

They include 3M, Corning Glass, Hoffman La Roche and Westinghouse. Their use of voice mail has been experimental so far, but this is changing, according to Rudov.

A system designed for hospitals and based on a centralised dictation system was launched in 1972, but it lacked the applicability to get the market going, Rudov said.

VMX applied for a patent for its

system in the US in 1979 and, much to everyone's surprise, got it in February this year.

The surprise was because the patent claim seemed to be far too broadly based to be allowable. It covers the general principles of digitising and storing voice messages, addressing the called parties and controlling access to messages by means of passwords. It also seemed that little in it was novel.

IBM, Wang, Rolm and Xionics in the UK have all announced or launched voice mail systems for end users. VMX and Voice Mail International run bureau services in the US and VMX, Commterm and BBI Industries sell to OEMs and PABX manufacturers.

VMX has an agreement with US PABX maker Intecom, which plans to launch a system by the end of the year. It has also sold a system to a UK subsidiary of ITT, the Commercial Cable Company, which plans to open a voice mail service bureau.

VDUs are cleared yet again

by John Riley
THE latest in a stream of reports clearing visual display units as radiation hazards has been issued by the Canadian government.

VDUs do emit radiation, especially close to the surface, says the report, but the amount is negligible and lower than that of standard electrical devices.

The report, by the Radiation Protection Bureau of the Canadian Ministry of Health and Welfare, is based on a study of 250 VDUs in offices. The study measured low frequency radiofrequency radiation (RF), extremely low frequency radiation emissions (ELF) and X-ray emission.

"The study was made because of the big hoo-ha in Canada with people thinking VDUs cause lots of illness, from child deformity to asthma," said Peter Wright, chief of the Clinical and Consumer Radiation Hazards Division. "The whole thing has been distorted by groups with axes to grind."

"We conclude that there is no reason for any person to be concerned about radiation from VDUs."

New Amdahl machine is delayed

PLUG compatible maker Amdahl will not now make its first design of the 5800 dual processor machine until early 1984, it means that IBM will probably be the market first with its final processor 3084 mainframe. The company says, UK users are not affected and can expect to receive the machine later this year.

Fourth report

A REPORT on fourth generation languages, one of a series of papers for information technology, the Civil Service, will be published at the end of the month. The report, by Ed Dea of the expert CACI for the government, procurement agency CCI, discusses tools like IBM's ALM, Mathematica's Ramis and Sperry Mapper.

Micro delivered

THE first two deliveries of a built, 32-bit scientific micro, developed at Bath University, are being made this month. The micro, called Darkstar, is made by the month-old company, SMI, of Gloucestershire, and costs £110 plus VAT.

Computastars find

GOOD news, sports fans: there is to be a 1983 Computastars European final. The organisers of the year's DP Olympic series was under threat due to a last-minute pull-out by the sponsors, four UK firms have stepped in to fill the breach. Kalamazoo, Legat General, Heywood & Partners and Crawford have provided the facilities, enabling the final to take place at Birmingham on Sunday, September 18.

The contract, signed in London last Thursday, also leaves Ericsson free to market the products itself in the US through its recently-formed American subsidiary, Bryn Threster.

"The financial world is in a state of flux and needs flexible computer systems that can respond quickly to change," he said.

New office

PROJECT Facilities Services, the fast-growing UK firm of computer consultants in planning of computer installations, has opened an office in Nottingham in addition to its existing headquarters in The Charn, Berkshire.

X test

SYSTEM X will face a major test of its commercial viability within the next few months when it is evaluated for service by the UK's independent telecommunications service, run by Hull City Council.

THRESHER... "Financial world needs flexible systems to respond quickly to change."

Sperry renews banking attack

by George Black
SPERRY is aiming to offset its cautious 1982/3 results with a new attack on the banking market in partnership with the Swedish firm, Ericsson.

The US mainframe giant's profits were slashed almost in half in the year ending March 3, 1983, falling from \$221 million in 1982 to \$118. Income was down around 9% to \$3 billion.

Determined to bounce back, Sperry has been lining up a series of joint ventures, latest of which is a deal with Ericsson to sell its new range of banking systems in the UK, Europe, Canada, South Africa and South East Asia. Ericsson will keep the Scandinavian market.

The contract, signed in London last Thursday, also leaves Ericsson free to market the products itself in the US through its recently-formed American subsidiary, Bryn Threster.

"The financial world is in a state of flux and needs flexible computer systems that can respond quickly to change," he said.

Ericsson about the US rights, but viewed Europe as ripe for exploitation.

US banks are in the throes of deregulation, tend to be much smaller and are still highly cheque-oriented. There is also an American bar on exclusive agreements.

This announcement follows Sperry's search for business mates that led to projects with Northern Telecom, Network Systems Corp, Magnetic Peripherals, Masstor and Amdahl's Trilogy. Ericsson itself has been broadening its scope, with a recent link-up with Honeywell.

Banking systems represent a market of at least \$3 billion a year up to 1985, of which Sperry wants 10-20%, according to its financial industries' marketing manager, Bryan Threster.

"The financial world is in a state of flux and needs flexible computer systems that can respond quickly to change," he said.

Sperry will be taking on Ericsson's System 2100 branch automation system and selling it under the label UFTS 600, complementing its 1100 and System 80 mainframes. Outside the US, banking computers make up a fifth of Sperry's revenue.

Much of the corporation's trouble over the past year has stemmed from manufacturing in the US and trying to sell abroad in the face of the overstrong dollar. While Sperry has netted a couple of huge contracts with the US armed forces, the foreign market has continued to pose a difficult problem.

The 2100, announced in March, has already won orders from Swedish banks worth \$100 million, according to Ericsson.

The week before the Sperry deal, Ericsson signed a joint venture agreement with Honeywell to develop telecommunications products.

UK firm with US cash sells British packages to States

by Claire Gooding
A SMALL Scottish software operation is setting up to sell British packages across the United States, funded by US money. Westminster Software Inc has already raised \$1/2 million seed capital from Wall Street backer EG & G, and plans to use the money to set up distributors in all major cities.

Westminster Software is the US subsidiary of Aberdeen-based Abtex, a distributor for Apple, Data General and other microsoftware. While Westminster is relying on its widely-used Perimeter critical path analysis software package as the main launch-pad for its marketing efforts, chairman and founder Charles Jordan is hoping to attract other British products.

"The common perception in the US is that we're very good at software in Britain," said Jordan. "We plan to use our Britishness as a major factor in our advertising and marketing campaign, hence the name, Westminster."

"Certainly people here are very supportive about the idea. The \$1/2 million we raised is entirely US money, so we are 20% US-owned, although the parent company is Scottish."

Jordan is looking for microsoftware in vertical markets associated with management productivity, cost estimating, planning, project management, cost control and source control. He is also looking for linear programming software, with the emphasis on graphics and user-friendly packages geared to professional users.

"As an Apple dealer, we constantly get brochures about such packages on sale in the UK, by UK software houses. But there's no high-profile marketing effort in the engineering arena, and it's a wide-open market out here. One sees the same few US-written packages on display at Comdex every year."

Perimeter — originally known under the name Microneel — is at present the only vehicle for Westminster's sales and marketing effort, but Jordan envisages a group of 10 or so British packages and is inviting UK software houses to submit their products for Westminster to market.

Westminster is making a major sales push with Perimeter, approaching stores across the US and offering co-operative seminars and training, advertising and marketing.

"We recognise that the main stumbling block is the evaluation and support of the chosen packages," said Jordan. "We have a team of evaluators in the UK, led by Geoffrey Rees, the author of Perimeter, and in the US we'll be employing some expensive people for support."

"We've already installed a toll-free 800 line for people with enquiries to ring us at our expense. We're also putting a lot of effort into adapting such things as documentation, but not too much."

"We're removing any ambiguities in the language without losing the essential Britishness — we've deliberately left the odd English spelling here and there in preference to using US spelling."

Westminster to the US way of doing things. The office will be based in Palo Alto and Jordan sees the co-operation of Silicon Valley companies as invaluable in improving the user-interface, particularly in the engineering products.

"We foresee using split screens, graphics, and windows — even CAD, as far as it's possible on micros," he said. "We'll be using US consultants to improve products where possible."

Commodore doubles turnover and profits

by Kevin Cahill
TRUE to his extravagant promises last year, Jack Tramiel has doubled turnover and profits at Commodore.

By doing so the former Polish refugee has overtaken Apple in terms of actual growth.

The figures show that turnover for 1982/3 jumped to \$681 million from \$304 million the previous year.

Much of the growth has come from aggressive expansion in the US over the past two years from beginnings which were predominantly rooted in the European marketplace.

The rate of sales growth is about 125%, more than 40% ahead of

Apple's annual rate as it slows down on the final approach to \$1 billion.

Commodore growth, on the other hand, is accelerating. Chairman Irving Gould said that the sales trend of the company's micro-computer product line was carrying over into this financial year.

The massive increase in sales has been accompanied by an equally impressive hike in profits from \$44.32 million in 1981/82 to \$91.7 million this year.

The company operates at the lower end of the micro market, which has seen companies Atari, Mattel and Texas Instruments rack up close on \$500 million in losses recently.

GOULD... "Sales trend is carrying over into this year."

UK distributors beat Americans to a single user Fortune

by Philip Hunter
UK DISTRIBUTORS have stolen a march on US micro maker Fortune Systems. The two distributors have brought out single user versions of the US company's successful multi-user range of super micros before Fortune's own single user version comes to market.

Both new machines will be priced from £4,000 to compete with hard disc versions of commercial 16-bit micros such as the IBM Personal Computer, ACT's Sirius and the DEC Professional.

The distributors had been waiting for Fortune to bring out its own single user micro, but went ahead with independent developments when the US company announced further delays.

The new machines are built around a \$8000-based central processor boards from Fortune, with the distributor's own choice of peripheral hardware.

One of the distributors, Tetra Data Systems, has added a British element by using Rodime Winchester disc drives.

"The great thing is that it is 100% compatible with the Fortune range," said Tetra managing director Keith Skinner. Tetra's machine, called the Tetra Professional, runs the Fortune operating system in single user mode as well as applications software developed for the Fortune multi-user range.

The other distributor, Reading-based IBS Microcomputers, said that a single user version of the Fortune computers had become necessary for the range to compete in the market for business personal computers. IBS had at the same time slashed the price of other computers in the Fortune range by about 35%.

"It is my view that Fortune took a high price position because they knew there was little that could directly compete," said Phil Blitchford, IBS general manager.

"The announcements mean a single user version is available in the UK before the US. Fortune UK managing director Bill MacPherson said that they were allowed to make the announcements because of the need to compete lower down the market. "We are finalising our own single user system and will shortly make an announcement."

"The announcements mean a single user version is available in the UK before the US. Fortune UK managing director Bill MacPherson said that they were allowed to make the announcements because of the need to compete lower down the market. "We are finalising our own single user system and will shortly make an announcement."

JONES... "We can install test systems."

Datapoint looks to telecomms

by Donald Kennett
THE progress of the government's liberalisation programme in telecommunications has encouraged the UK subsidiary of Datapoint to set up a telecommunications division.

Marketing executive Glyn Jones said: "We're at the stage in the approval cycle through the Department of Trade and Industry (DoTI), where we can go ahead with installing test systems. We are confident we will get approval for the first products in a few months."

The first product will be the ACD automatic call distribution system, which uses a standard disc-based Datapoint 6600 mini to control telephone switching devices as it would any other peripheral.

It will cost about £2,500 a telephone extension and its main advantage over the key-and-lamp units traditionally used by telephone sales teams will be the range of management information packages that will be available for it. Since the 6600 is one of the processors that attaches to Datapoint's Arcnet local area network, it will be possible to interrogate the ACD from any workstation on the network, according to marketing services manager Alan Watson. "The managing director can see

the volume of calls coming in and how quickly they are being responded to," Watson said. "In a confirm the reservation more quickly you get the business."

Packages that will be available for the system include the EBP equipment billing software that analyses the costs of using different parts of the telecommunications system and the CDR call detail recorder software and hardware add-on that logs call and identifies costs per department or per extension.

The division and its products will make their public debut at the Association annual conference next month. "Their 600 delegates have a £2 billion a year spending power and we are looking to get a small percentage of that," said Watson.

Included in the products to be demonstrated will be the TDP Arcnet directory which runs on telephone operators in keep track of 20,000 internal telephone users on three sites. Arcnet was recently installed on its 200th site in the UK, at Man-Quick, where it will be accessed by Datapoint processors on 15 sites. Worldwide installations have reached 5,000.

Tandem prepares for hardware competition

by Claire Gooding
THE NonStop manufacturer, Tandem, is getting its act together with software houses to face the stiff competition on the hardware front. The manufacturer has put together a programme, grandly titled "The Tandem Alliance" to encourage software houses to produce applications for Tandem's NonStop computers.

Until recently, Tandem, along with British manufacturer GTE, has dominated the market for reliable systems. Users of Tandem's

robust hardware, which runs in parallel to minimise system crashes, have tended to be in the "top 1,000" category. Several competitors are now moving in on this lucrative sector. US firms Sparco, No Nak and BCU, and British newcomer BCU, are responding to the competition by looking for a wider market - in transaction processing, banking, distribution and message switching.

Software houses, mostly large and well-established ones such as Logica, SPL and SCL, which have plenty of experience in real-time programming, are being wooed by Tandem. "The Alliance offers advantages similar to the 'special relationship' deals made by ICL in its Tandem Point marketing scheme," Tandem promises participants discounts on kit bought for training, help in design and software house that sells a Tandem system using its package.

Police urged to use micro package for murder hunts

by Paul Walton
POLICE are being urged to use a specially-written microcomputer package to run major incidents, like murder investigations, while a more sophisticated Honeywell mainframe system is being tested. And the Home Office is putting up money for forces to install suitable hardware to run it.

Autoindex from Microproducts Software is the CPM-derivative package commissioned by the Home Office, following the controversial Yorkshire Ripper enquiry which took so long to complete.

It improves the handling of large amounts of data held on card indexes and increases the chance of making connections that may lead to possible suspects.

Police in several forces will now be better able to work together, sharing data in major incidents, using Autoindex.

Written in the BOS dialect of CPM, it will be able to run on most of the standard microcomputers that are presently employed

by the police. Essex police are just beginning to test the capabilities of Honeywell's more sophisticated Miriam incident system.

There are already plans to cut its prohibitive cost by developing a cheaper microcomputer version. But in the meantime, Autoindex is the only incident room package on offer to the police.

A Home Office circular put forward Autoindex - which has already been tested on the UK-built Trivector microcomputer - but it said that the software would not be used in the present Maxwell/Hogg murder hunt.

Autoindex is a structured file system. It ensures that any piece of data that occurs several times in one or more sets of records is noted as being significant.

But Autoindex does not have the sophisticated free text retrieval ability of Miriam, where incomplete scraps of data can be monitored automatically.

Autoindex is believed to cost several hundred pounds.

The Home Office will pay half of the capital costs involved in setting up new systems of three to four terminals for forces which do not have the hardware already.

Data is shared between forces by special secure phone links.

A Honeywell spokesman said that both incident packages could be used by the police at different levels.

"Autoindex will appeal to those authorities that cannot afford or justify the use of Miriam," he said. Honeywell wants to bring down the cost of Miriam from hundreds of thousands of pounds, by developing a version to run on its new, cheaper DFS-6/10 and /20 microcomputers.

The Home Office said that Autoindex was "an interim solution."

One part of the Essex trials of Honeywell's Miriam will be a feasibility study of regional, national or even microcomputer versions of the sophisticated package, conducted in an attempt to bring down its price.

Select your own choice to be awarded a Rita

NOMINATIONS now are being accepted for two major awards for the UK computer industry. Awards for "Systems Innovation of the Year" to be sponsored jointly by the National Computing Centre and Computer Weekly, and "Newcomer of the Year", sponsored independently by Computer Weekly, will be given under the Recognition of Information Technology Achievement scheme (Rita).

Nominations in each category will be presented to a distinguished panel of judges, with the winners being announced at the Rita awards dinner in Birmingham on January 17, 1984.

The ground rules for nominations are simple. Select your choice for "Newcomer of the Year", or "Systems Innovation of the Year", or both, and complete the form below. A separate entry should be made for nominations in each category.

The award to "Newcomer of the Year" will go to that start-up computer company which the judges think best exemplifies how the UK can remain a force in information technology markets.

The company will have been in business less than two years as of the time of close of nominations on

September 30, 1983. Judging criteria will be relatively open-ended, but can include: financial performance (where available), market penetration, employment opportunities, innovation, and initiative and imagination.

The company must be of UK origin, and should be involved in the provision of hardware, software, or services to the information technology market. "Systems Innovation of the Year" will be awarded to that complete system, component, peripheral or part of a system which is judged to be the most outstanding example of achievement in the field of information technology in the UK during 1983.

The equipment or systems must be available in the UK during 1983, and the innovative element in the system must be wholly or predominantly of UK origin. Software alone and word processing or office systems are precluded as these are covered by other Rita awards.

Companies or individuals cannot nominate themselves. Members of the staffs of Computer Weekly, the National Computing Centre, and Clapp & Pollak may not enter.

In each award category, a case of

wine will be awarded to the person who first nominates the ultimate winner. In addition, the first person in each instance who nominates one of the two runners-up will also receive a case of wine.

Nominations should include a short statement explaining why the company or individual should be judged the "Systems Innovation of the Year" or "Newcomer of the Year". Nominations must be received by Computer Weekly before or on Friday, September 30, 1983.

Judges for the Rita awards 1983 are: Doug Eysenck, director general, Computing Services Association; David Flimberg, deputy president, British Computer Society; David Fairbairn, director, National Computing Centre; Ted Cluff, secretary general, Institute of Data Processing Management; and Dr Paul Freeman, director, Central Computing and Telecommunications Agency.

There are six other Rita awards in addition to those sponsored by Computer Weekly and the NCC: Software Product of the Year; Office System of the Year; Supplier of the Year; User of the Year; Personality of the Year; and Best User's Training Method of the Year.

Return this form, to arrive by first post September 30, 1983, to: Linda Allen (Rita Awards), Computer Weekly, Room L218, Quadrant House, The Quadrant, Sutton, Surrey, SM2 5AS.

I wish to make a nomination for the Newcomer of the Year/Systems Innovation of the Year award. (Please delete where appropriate. If you wish to nominate in both categories, please photocopy this form.)

SALES BRIEF

Nixdorf takes three orders for the 8870

NIXDORF last week took three orders for its 8870 range of mini, bringing total UK sales this year to over 50, worth between £2 million and £3 million.

The Delsion Group ordered a system with Nixdorf's Comet software for £97,000 for control of its stock of industrial fasteners. Fair Filtration, maker of air filters, ordered a model for management statistics, and Scottish shoe maker William Smith has bought one for stock control.

College contract

PRIME has picked up a big order for five minis under its £4 million education programme of subsidy for schools and colleges. Essex County Council has ordered five Prime 2250 minicomputers to be installed at technical colleges throughout the county.

Fashion project

DEBENHAMS computer subsidiary DISC and Universal Computers have combined in a £200,000 project to provide a large fashion house with a stock control package. The system, including a £48,000 mini from Universal, will be installed at the Croydon HQ of London Manufacturing and Supplies which markets fashion wear to 130 UK department stores, including 70 in the Debenhams chain.

Solicitors buy

HOME Counties legal software specialist Miles 33 last month signed five contracts worth a total of £250,000 for its Solicitor's Office Management System. Buyers included Withers, one of the UK's biggest firms of solicitors, which is having the system tailored for Trust Accounting File and Deeds Register in a contract worth £100,000.

Synapse chosen

UK SOFTWARE house Synapse Computer Services has been commissioned by the leading maker of liquid fertilisers, Chasfer, to provide software support for an IBM 4331 mainframe installation. The system runs under DOS VSE and gives online and batch communications through CICS to a DLA data base.

Unilever picks

GIANT UK industrial group Unilever has picked STC Business Systems for equipment worth £50,000 to automate the existing manual telex link. STC will supply the 6100 text communication system, which will also link wordprocessing facilities into the company's communications network.

Hoskyns signs

HOSKYNs has signed the first two contracts for its new range of financial software for IBM users, announced last month. The two orders, with total value £100,000, come from the London-based Rybeck Group and Pirelli of Burton-on-Trent in the Midlands.

Rediffusion deal

REDIFFUSION has sold data preparation equipment worth about £100,000 to two London boroughs. The Metropolitan Borough of Calderdale has bought a 1200 telephone system for £42,000 and Hounslow has ordered a larger version for £52,000.

Second Harris

ASTON University is spending some of its £1 million for improving library and computing services on a second Harris computer. The first machine installed last year had become overloaded. The two machines will be coupled.

Cable & Wireless gets on US rails

by Donald Kennett
CABLE & Wireless is working on a series of Mercury-like trunk telecommunications networks in the US.

Chairman Eric Sharp said "Agreement has been reached with one US railroad, and discussions are well advanced with another, for the formation of joint venture companies to promote the use of railroad rights-of-way for telecommunications purpose primarily using buried fibre optic cable."

Sharp added that his company was in discussion with other major railroads to establish similar agreements to build a series of regional networks in groups of counties, rather than coast-to-coast long distance routes which

the company feels are well covered by independent competitors.

Sharp said that the company's turnover in the US had increased by more than a third in the last year. The US and the UK were two of the world's major potential growth areas, he said, and increasing deregulation in the US was opening up new markets where the company could employ its expertise.

A third potential area was China, where C&W had formed one joint venture with Chinese partners two weeks earlier.

The company had also acquired nearly 35% of the Hong Kong Telephone Company and had put three executives on its board.

Sharp said it was important for

shareholders to realise that the new business opportunities the company was pursuing required investments that would not always produce immediate earnings.

The accounts to the year ended March 31 showed the company's performance in the first full year since it was privatised in November 1981. Sharp said. Privatisation had set a pattern for progress which had been evidenced by the establishment of new businesses and by record profits. Profits grew 76% to £157 million on a turnover that grew 15% to £403 million.

The chairman's performance - reflected in these figures - was rewarded with a 114% salary increase, from £52,245 to £111,952.

Cable & Wireless wants to lay down fibre optics alongside US railways.

Stagnant teletex is expected to grow

by Nuala Moran
TELETEX the system for international transmission of documents between terminals anywhere in the world, has made little progress towards being a viable service in the three years since it was introduced. Furthermore, its acceptance by the user community is non-existent.

This is the conclusion of a report on teletex to be published soon by the Yankee Group of consultants.

According to the report, the last two years have been especially discouraging, with almost no developments of any significance.

Despite this, the Yankee group says the rate of installation of

teletex terminals will increase rapidly in 1983, going from 1,500 to 8,000 worldwide. Almost exponential growth is forecast for the years between 1985-1988, and by 1990 there will be a million terminals in Europe and 750,000 in the rest of the world.

This is a very fast growth and the Yankee Group says there is a good reason to be optimistic. It picks three things which it believes will fuel growth.

The first is that telex standards will soon be available so that users can have boards inserted into installed terminals to make them instant teletex terminals.

Secondly, 19 countries and their

telecomms bodies will support the standard, so it will be acceptable to the market place. The third factor will be compatibility with telex.

Paradoxically, one of the main factors which the Yankee Group identifies as fueling teletex growth in Europe is the lack of awareness the group says European managers have of the advantages of office automation.

This will work strongly in favour of teletex, according to the report. "Because European companies tend to have less installed office automation equipment they can look to teletex as the first step to more advanced technologies," it says.

But it also says: "It would be over optimistic to assume that managers themselves would welcome the opportunity to operate terminals and type their own messages... European managers are verifiably terminal shy."

Another problem is the commitment to telex among the European telecomms bodies. Use of telexes has grown in recent years, and it is a profitable business. So teletex will have to have plenty of subscribers to compensate for the loss of revenue from telex.

* The report will be available from: The Yankee Group, The Old School House, George Street, Watford, Hertfordshire. Tel: Watford 46311.

CAD agency is born

by Philip Hunter
THE growing market for computer aided manufacturing and design (CAD/CAM) has spawned its first specialist recruitment agency.

The company, called CAD Search, has been set up in London by three ex-directors of a general recruitment agency, continuing a trend towards more specialisation among computer job agencies.

The company has scored an early success by quickly finding ICL a CAD systems manager. "ICL rang up they had been looking for three months," said David Hendry, one of the three founding partners. "We found him."

Hendry is looking to turn over

£180,000 in his first year, which at an average of £2,000 for each placement means filling 90 vacancies.

There are in the UK about 1,000 CAD specialists, plus another 2,000 or so programmers working on CAD/CAM applications.

"But there is a demand for far more people," commented Hendry. "There is a particular shortage of senior CAD/CAM people worth at least £15,000 a year who can really make CAD systems work," he continued. Because of the shortage, users are pinching staff from the vendors, which only makes the problem worse.

DAVIES & PRICE SECURITY IN TELEPROCESSING

New 3083's from ATLANTIC — this year!

We do not normally advertise IBM equipment which we have available. We believe that the 3083 is a very special case though.

Atlantic has the following new 3083 systems available for lease and for delivery in the UK before the 31st December 1983.

MACHINE	SYSTEM REFERENCE
3083.B24	FQ2CW
3083.J16	FQ2DP
3083.B16	FQ2DZ
3083.E16	FQ2DG

We can offer very competitive Flexlease or operating leasing terms on these machines provided you place your order by the 20th September.

Why not call us for a quotation — you have nothing to lose. Call Jeremy Crane or Steve Mason on 01-583 9481.

ATLANTIC Computer Leasing plc
Atlantic House Red Lion Court London EC4A 3EB.

TRAK's course is the tops with 89%

by Nuala Moran
A STEEL worker who was made redundant several months ago will go back to work soon as a microcomputer engineer. He has just completed a 20-week course run by TRAK, the training arm of Kalamazoo, the Birmingham-based business systems company.

Fifteen of the 17 other students on the course found jobs before it was even over, including one who is going on to train other people in micro maintenance.

The course is backed by the Manpower Services Commission as part of the Tays training opportunities scheme. It is designed to give people skills in microcomputer servicing, leading to careers in micro engineering.

Placing 89% of the students before the course was over broke all records at Kalamazoo's training headquarters. The Tays national average for people getting jobs is 43%.

A spokesman for Kalamazoo explained that the company was aware from its own experience and from contacts in the industry that there was a shortage of skills in micro engineering.

Kalamazoo used its own expertise to set up and design the course. Following the success of the first course, another will be run later this year, and a further one early next year.

Students on the course were selected by Kalamazoo. They all had some experience in electronics or engineering.

Course students run through a test procedure - 16 of them have found jobs.

The course is run by two teachers. One is seconded from Kalamazoo's manufacturing division, and guest speakers are invited to contribute.

Kalamazoo has over three years' experience running Tays programming courses. At the moment it is looking at requests from other companies to train staff. This includes requests from competitors of Kalamazoo.

The spokesman emphasised that the course is not one in how to service Kalamazoo machines. But such training courses do work wonders for the company's reputation.

As the spokesman said: "People who are Kalamazoo trained remember where they got their training."

UK micro firm flirts in failsafes

by John Riley

A SMALL British microcomputer company is set to make a foray into the failsafe computer market. Orington-based BCU Computer Services in Kent expects to sign separate deals in the next few weeks with two new US companies that would give BCU total UK rights to their fault tolerant systems.

The US companies, No Halt Inc of Farmingdale, Massachusetts, and Parallel of Santa Cruz, California, were both founded by men who worked on the NASA space programme. The systems from the companies are still in final testing stage, but BCU plans to make the first launch of the products at the Connech exhibition this autumn.

BCU, which was founded 10 months ago, has been building up its capital to enter the failsafe market by distributing a wide range of software packages and Televideo micros.

"We looked for micro systems built to mainframe fault tolerance," said BCU's technical director and former IBM man, Phil Clarke.

Clarke was confident that the No Halt and Parallel systems would fit BCU's specification. BCU has sent a team to the US to try to "crack" the products, Clarke said. "We've been invited over to break them," he said, "but the manufacturers are confident we won't."

BCU plans to chase the lucrative IBM System 34 upgrade market with the machines. A large number of computers are offered, including RPG. Clarke envisaged no problems for existing System 34 users moving across to the fault tolerant machines: "There will be no problems with screen handling," he claimed.

The multi-terminal No Halt machine is based on a Z80B chip, and an Intel 8086 can be added.

Clarke said it ran TurboDOS Unix, as well as CP/M and PC-DOS. Entry price was expected to be around £15,000 and the base speed with the Z80B chip was 1 MIPS with 128 Kbytes of RAM, he added.

The Parallel is MC 68000 based with a base speed of 4.5 MIPS and is Xenix based. Entry price is expected to be in the region of £30,000.

Both systems were both hardware and software fault tolerant, said Clarke. "If a board or a disc blows, then the machine will automatically configure itself out of the system so that you can replace them while the machine is still running."

"On replacement they will automatically reconfigure. If the power supply goes and the battery backup is tipped out, there is enough latent power to do everything in storage on a disc," he explained.

High flier's F International career ends with acrimonious injunction

by Philip Hunter

JANET Lennon's high flying career as a regional sales manager for software firm F International has ended acrimoniously with an interim injunction stopping her from starting her new job.

Her five-year term with F International had been flushed with success. In 1981 she reached the final of the national "Salesman of the Year" contest and then in 1982 she went one better by winning the ICP "Super Software Seller" award.

But when she gave her six months' notice in June, she was told to leave at once without working out her notice.

F International then sought an injunction to prevent her starting with the new, rival company, Dator Management Services, until December 23 1983.

The court will not give the case a full hearing until October, but has meanwhile issued an interim injunction to stop Lennon taking up her new post.

F International chairman Neil Pollock said the company had sought the injunction because it believed Lennon and others were using confidential information to help the new business.

F International employs a lot of freelance programmers and analysts. Pollock claims Lennon and other members of Dator had offered these freelance people work by using F International's list of their names and addresses.

F International had also sought injunctions against Dator chairman Nils Elrin and others to prevent them from using so-called confidential information. This application was later withdrawn when the defendants agreed that they would not breach any code of conduct.

Elrin admitted having previously used the list of names and addresses taken from F International, but still denied that they were confidential. "It's not a confidential list," he said. "The names and addresses are public knowledge."

The list was, after all, of freelance staff, continued Elrin, and therefore could not be the exclusive property of one company. Elrin suggested that F International had overreacted to the case because of recent discontent in the company, which has resulted in an exodus of key staff including several to Dator.

Pollock has also accused Lennon of trying to poach his permanent staff. Lennon and Elrin dismissed this as rubbish.

The court will not give the case a full hearing until October, but has meanwhile issued an interim injunction to stop Lennon taking up her new post.

F International chairman Neil Pollock said the company had sought the injunction because it believed Lennon and others were using confidential information to help the new business.

F International employs a lot of freelance programmers and analysts. Pollock claims Lennon and other members of Dator had offered these freelance people work by using F International's list of their names and addresses.

F International had also sought injunctions against Dator chairman Nils Elrin and others to prevent them from using so-called confidential information. This application was later withdrawn when the defendants agreed that they would not breach any code of conduct.

Elrin admitted having previously used the list of names and addresses taken from F International, but still denied that they were confidential. "It's not a confidential list," he said. "The names and addresses are public knowledge."

The list was, after all, of freelance staff, continued Elrin, and therefore could not be the exclusive property of one company. Elrin suggested that F International had overreacted to the case because of recent discontent in the company, which has resulted in an exodus of key staff including several to Dator.

Pollock has also accused Lennon of trying to poach his permanent staff. Lennon and Elrin dismissed this as rubbish.

The court will not give the case a full hearing until October, but has meanwhile issued an interim injunction to stop Lennon taking up her new post.

F International chairman Neil Pollock said the company had sought the injunction because it believed Lennon and others were using confidential information to help the new business.

F International employs a lot of freelance programmers and analysts. Pollock claims Lennon and other members of Dator had offered these freelance people work by using F International's list of their names and addresses.

F International had also sought injunctions against Dator chairman Nils Elrin and others to prevent them from using so-called confidential information. This application was later withdrawn when the defendants agreed that they would not breach any code of conduct.

Best system baa-none for the farmer

SUSSEX farmer Michael

Hurnford has written his own programs to help with his lambing. They run on an Epson TX-20 portable micro and keep track of his flock of 400 ewes at Pulborough.

He hopes to sell them to other farmers through Epson dealer Stoddard of Horsham.

Datadube launch

MICROSOURCE of Rochester, New York, has announced that it has brought out a financial modelling package called the Datadube. It is a software package for IBM PCs and compatibles.

Japanese wake up to APL

by Claire Gooding

JAPANESE interest in the high-level language APL is about to take off, fired by low-cost versions designed to run on micros. British APL supplier MicroAPL has already signed a high-volume agreement with APL Consultants of Japan Ltd. And major APL bureau STSC, parent of APL*Plus, is also negotiating Japanese outlets for its products.

APL has a strong but silent presence in Japan, where IBM's grip on the mainframe community has brought the language into one in three mainframe installations.

Since the language has crept in as the main ingredient in IBM's Information Centre packages and is almost exclusively associated with IBM, it has taken a while for Japanese users to realise how much APL can do. Now that micros have breached the traditional APL mainframe territory, the Japanese have recognised its potential.

APL is in effect a mathematical notation - hence the hieroglyphics adored by APL enthusiasts and deplored by APL critics. For once the hieroglyphics work in APL's favour, since they make it easy for Japanese users to get to grips with concepts rather than

translating from Western computer languages.

APL Consultants will be marketing the Insight terminal and keyboard fitted with the APL character set, along with the MicroAPL software.

Kyosuke Saigusa, former head of IBM's APL division in Japan, who now heads APL Consultants, plans to introduce a Kanji version of the Insight terminal. "Although there are many Japanese terminal manufacturers," he said, "they do not understand the needs of APL users."

MicroAPL sells the terminal as part of the APL 68000 product, which runs in the UK on the TDI Sage and MicroAPL's own Spectrum machine (nothing to do with Sinclair's micro of the same name). It is a fast machine-code implementation of the language, originally written by The Computer Company of Richmond, Virginia, and enhanced by MicroAPL in the UK.

MicroAPL recognises that the Japanese market is not an easy one to crack, but according to sales engineer Adrian Fletcher, the time is right for APL to take off.

"It's early days yet, but as personal computing gets under way in Japan, the opportunity for micro

COCKING... "Opportunity in Japan must be phenomenal."

Japan APL will come into its own in such areas as financial planning and operational planning," he said.

"One of the main reasons Japanese users find the language attractive is that it doesn't deal with constructions like DO WHILE and IF THEN ELSE, which tend to be less meaningful in Japanese."

APL consultants Cocking and Drury agree that APL is ready to take off in Japan. "APL is already quite big there," said co-founder Romilly Cocking. "Micros are the big opportunity in Japan for APL. Given the expansion of the market there, the opportunity for micro

sales of APL in Japan must be phenomenal."

Few details are available about STSC's plans to sell its products in Japan, but the IBM PC version of APL*Plus packages are obvious vehicles for its long-planned push into Japan.

APL bureau APL*Plus is sharing its IBM products in a joint marketing agreement with APL Consultants Cocking and Drury. The packages concerned in the scheme are the APL*Plus PC interpreter, the financial planning system FPS and the APL*Plus interpreter for the Tandy TRS80, which start in the £275 range.

"We have duplicated the Wang Basic as far as possible," explained Bob Minger, Wang's director of Mid-West and Canadian operations. "Some changes had to be made, which cut out some of the low-level language operations, but they were not severe."

Tom takes the Unix route

by Claire Gooding

THE Office Manager, supplier of business applications for Wang users, is chasing the Unix bandwagon. TOM has announced a Basic language interpreter, TOMbasic, which takes the company down a different route from that used by most companies implementing their software under Unix.

TOM has signed agreements with five manufacturers whose names are already strongly linked with Unix, Altos, Fortune, Pixel, Plexus and Prime. Other agreements are in the pipeline, all involving Unix-based systems. At present only Speed 1, the software built for the Wang 2200 series, is being converted but the product has been around long enough to spawn a large range of applications which are badly needed among Unix users.

Applications already available through the interpreter include business management, accounting, residential and commercial construction, restaurant and property management and distribution packages.

Wang's slightly quirky implementation of Basic is the factor that gave Speed 1 its power and flexibility when it came to customising applications. The string-handling facilities are particularly significant, and it is to preserve these and other features that TOM went to the immense effort of several man-years re-writing the Basic to run with Unix systems and the C language.

"We have duplicated the Wang Basic as far as possible," explained Bob Minger, Wang's director of Mid-West and Canadian operations. "Some changes had to be made, which cut out some of the low-level language operations, but they were not severe."

"We have duplicated the Wang Basic as far as possible," explained Bob Minger, Wang's director of Mid-West and Canadian operations. "Some changes had to be made, which cut out some of the low-level language operations, but they were not severe."

"We have duplicated the Wang Basic as far as possible," explained Bob Minger, Wang's director of Mid-West and Canadian operations. "Some changes had to be made, which cut out some of the low-level language operations, but they were not severe."

GROUND FLOOR SHOWROOM with Parking-in the mainstream of micro processing

Standard Chartered Bank has vacated 8000 square feet of suitably opulent accommodation on the ground and first floors of Kimberley House, Vaughan Way in the centre of Leicester.

The Bank is moving to larger premises in a city where there are so many micro-processing firms that the local Chamber of Commerce has opened a special department to handle their business.

These centrally heated premises with ten underground car parking spaces are held on a 25 year lease which expires in March 2002. The rent is £8,100 p.a. and the next review is in 1987.

Leicester stands at the heart of the motorway network a hundred miles south of Manchester and a hundred miles north of London. Fifty-three High Speed trains link Leicester with the capital each day. For further details and an appointment to view contact:

Tarrant/Carr Commercial, 16 Market Street, Leicester. Telephone No: (0533) 653371 or (04555) 56351.

Taking education to the kids' party

A VERY special meeting took place in London last week to lay plans for the Sixth Generation. Those present got a privileged look at some revolutionary new programs which were quite stunning in their simplicity.

by George Black

The whole event was highly secret - at least until Stuart shouted that he had scored 116 at "Hot Dot Spotter", thus establishing a new record.

The occasion was a children's party thrown by publisher Longman to launch its educational software for four to eight-year-olds - thus taking the state of the art at last to its logical limit, the primary and pre-primary school group.

Longman expanded from textbooks to programs for BBC micros in schools some time ago and has now gone a step further with three educational programs for children to use at home without the need for help from teacher or parent. The programs run on the Sinclair ZX Spectrum and were

devised by Longman's Graham Harding with advice from specialist software house Quantic. "Hot Dot Spotter" was the favourite with the older ones. Six-year-old Ben quickly became adept at counting them, in spite of constantly changing patterns, and boosted his score from 20 to 59. Jim reached 79 and got told by the screen "that was great", but wandered off in search of a drink, impervious to flattery.

Helen, who was younger, preferred "A, B, C, Lift-off" - a bit like Snap, except you have to match picture to word - because, she said, at the end the rocket goes off to the moon. It certainly goes off somewhere, so she was probably right.

Green eyeshades were de rigueur for the boys, optional apparently for the girls.

Jennifer was having a go at "Countabout", trying to get a monkey to climb a tree after a bunch of bananas by a series of addition sums. Soon the host got to her and she set her mind to exchanging her nasty pineapple juice for a Pepsi - an excess of

which may have contributed to Stuart's outstanding performance. Two of the girls in white party frocks were soon sitting on the carpet with red faces, complaining of heat and tiredness and wanting to go home. The boys had to be dragged away despite having been at it since early on.

Harding said there was a big difference in designing programs for home use to those for the classroom, which had not been properly appreciated. In schools the programs were still mostly of the blackboard and chalk format, which children did not find much fun, even if they could get near the school's only machine - so they preferred games.

The first three Longman offerings are to be distributed by Sinclair agent Prism. More will follow in October and possibly others on Commodore and Dragon.

One weary mother confided: "I wish we'd got one of these things at home. It'd keep them out of trouble during the summer holidays. And it'd be doing them some good."

Children prefer games to the blackboard and chalk format programs.

Green eyeshades were de rigueur for the boys.

DOWNTIME Top of the Pills

THE computer that Gallup uses for opinion research is kept busy at election time crunching up the latest off-the-cuff voting intentions. But in the years in between it compiles the BBC pop charts.

Now we can add another service - Top of the Pills. The works by analysing sample data from 400 clients and assuming that the pattern to emerge is representative of the whole land.

It has already proved attractive enough for one drug company to

IT COUNTS SHEEP FOR ME

take out a £15,000 subscription. One hopes that drug companies resist the temptation to sweeten their pills in order to get them high in the charts.

10 YEARS AGO

FROM COMPUTER WEEKLY OF AUGUST 16, 1973: RCA said that more than £54 million would be realized from the sale of its general purpose computer base to Sperry Rand. Data Recording Instrument Company of Staines, Middlesex, took 10% share in a new peripheral company, Orbis Systems of California. A link-up between financially-troubled Memorex and Singer was called off.

Open space

EVEN big companies like to receive the occasional accolade, be it sincere or sycophantic, and then create a little fuss about it.

So we hear from Thorn EMI that one of its subsidiary companies has been given a certificate of appreciation by the US National Aeronautics and Space Administration, NASA.

"Outstanding performance in the design, management and fabrication of the Spacelab high density recorders," the certificate reads.

Perhaps the next certificate of appreciation will have oysters, rather than letters, written on it.

MPs for all sessions

MPs WHO want to sleep with their wives at night should not put themselves down for the parliamentary committee to study the British Telecom Bill. That was Labour MP John Goding's message last week. Goding was anticipating long sessions over many months.

Just what the sessions will involve remains a mystery, but the implication of extra-marital oughtness springs unbidden to my, admittedly warped, mind.

Take cover with a portable

CORNHILL Insurance (the Test Match lot) has extended its free accidental damage cover to home computers.

And the new cover doesn't stop at household machines. The publicity states that portable

micros are covered too: "An Osborne is as safe as an Apple," it proclaims.

So perhaps the cover could extend to personal injury resulting from heaving one of Uncle Adam's "portables" around?

PLATFORM

Why many trainees can't get jobs

MUCH has been written about the plight of trainee analysts and programmers, particularly Top graduates, who remain unemployed despite completion of intensive courses offering a virtually guaranteed entry to the "career of the future".

Although data processing has been the career of the future for over 20 years, many resign from perfectly good jobs because of the apparent opportunity and reward offered by the computer industry.

Although it would be easy to blame companies for failing to employ more trainees it is worth examining reasons for not doing so.

Firstly, I suspect that most managers do not appreciate the quality of available candidates or, indeed, the generally high standard of training provided under the Top scheme.

Those organisations brave enough to advertise for trainees will receive a typical response of 400+, including a dozen or more superb candidates.

There will also be a much larger number of less spectacular candidates, most with solid business experience and over 60% educated to degree level.

Against such candidates, the person with a 10-year labouring background stands little chance.

Unfortunately, the prospect of dealing with a deluge of unsuitable candidates dissuades many potential employers, and most recruitment agencies, from considering trainees at all.

There are still wide variations in standards of selection and in the job-hunting assistance given on completion of courses.

For example, in August 1982, a group of 17 would-be analysts finished a Top-sponsored course with the organisation which reckons that four months of "intensive" training provides the equivalent of 18 months' practical experience.

Although this may well be true, potential employers don't see it that way, as evidenced by the fact that only seven of the students had obtained computer-related jobs by December.

In comparison, the London branch of the Control Data Institute, which has two people working full-time on the selection and placement of students, consistently achieves an 85% placement rate.

Of 13 people who completed a CDI programming course on December 3, 1982, for example, 11 had started relevant jobs by January.

If the results of Top training establishments are variable, at least some standards are enforced by the Manpower Services Commission - which cannot be said to have a mission - which cannot be said to have a mission.

For many people, the street of the computer industry is clearly not paved with gold, and in my opinion, a reduction in the number of potential trainees would be of benefit to all concerned.

Is DEC looking for an identity?

WHICH, one might ask, is the more significant: the dramatic slump in Digital Equipment Corp's annual profits; or the seeming stampede of senior DEC executives to new pastures?

Both are indicative of the problems DEC has been having as it tries to reposition itself in the marketplace. After years of strong growth, the company has arrived at a watershed. That in itself is no bad thing. It is a rare company which goes from strength to strength without ever having to stop and consider where it has been and where it is going.

IBM not so long ago went through a similar period of retrenchment. Until last year's surge in profits, IBM went through a period of almost no growth, if one takes inflation into account. But the "new" IBM has shown itself to be fully capable of adapting to the changing marketplace.

No doubt DEC will also show the ability to adapt, although the adjustment is taking longer than might be expected. Central to the problems the company is facing is the switch it has made from being a supplier to the scientific and technical community to being a supplier of commercial systems.

It is only in the past year that the number of commercial Vax installations has surpassed those in the scientific marketplace. Decus, the DEC user group, has also had to catch up with the times - it held its first commercial group meeting in May of this year.

The disagreement DEC has had with its distributors, the problems with systems houses such as Darkcrest, and the tough situation that surrounds the withdrawal of future developments on DECsystem 10 and 20 mainframes are all symptomatic of a company attempting to make major changes in the way it attacks the marketplace. The changes, no doubt, are necessary, and it is not surprising that there is a little bloodletting on the way.

The departure of four top executives in recent weeks also reflects the changes.

DEC has not had a history of losing senior people, although it is a tradition which affects most of the major companies in the computer industry. That it is losing people now is no reason to cry wolf. It is a sign that DEC is looking for a new identity.

For DEC users, recent developments are no doubt confusing but most of the users seem to understand. The most constructive role they can play now is to ensure that the decisions DEC management takes have a proper airing in the user community.

Window on micros

EVERYONE seems to be excited by the concept of Lisa, but few are ready to put up the £12,000 or so that Apple is demanding for its prestige product. Like graphics, the window techniques used by Lisa are becoming the essential feature of every up-and-coming system.

Real user-friendly computing will be essential if there is ever to be a workstation on every manager's desk. The snag is cost, and the processing power demanded to put more than one pretty pattern at once on a screen.

Now Digital Research, whose CP/M operating system already compares with Henry Ford's Model T, is promising to bring out an affordable version of the window technique.

The point of Digital Research's Visual Information Processor, or VIP, is that it is for the user who, like the majority of microcomputer installations, is still limited to floppy discs and under 256K of storage. Almost as important, Digital Research is rumoured to be selling the system to manufacturers for a song.

A really inexpensive user-friendly system would go a long way towards breaking down what barriers are left to the universal use of micros by end users. Several major manufacturers in the US and UK are already thought to be discussing Digital Research's cheap and cheerful solution.

Even if all that is promised does not come true in the end, users should take heart at the direction the software industry is moving.

1984 and all that...

THIS week's example of the strange things people say about computers was sent in by Jackie Burke, of London who wins £5.

Future warfare will not be between man and machine, but between different software systems!

LETTERS

Put VDUs in smokeless zones

BARELY a week goes by without an article appearing in some publication or other, claiming that VDUs are safe, or that they are only safe if they are designed and used in accordance with certain rules. What puzzles me is that, as far as I know, not one of these articles has discussed whether it is safe to operate a VDU in a room in which smoking is also permitted.

We know that CRTs generate electrostatic fields. We also know that objects in such a field can acquire charges, and that objects

with opposite charges are attracted to each other.

So, what happens to smoke particles when they enter an electrostatic field? Could that field make them more likely to stick to the face, eyes or lungs of the operator? Alternatively, could it exert a force on smoke particles which have already stuck to the face or eyes? If so, a person operating a display in a smoking room will experience even more discomfort than somebody just reading a book in there.

Even ignoring the possibility of an extra risk from the VDU, it is well known that working in the presence of smoke is an unnecessary health hazard. Experts are agreed that VDUs, used correctly, are not a health hazard. So it seems logical for all publications to recommend that displays should only be installed in non-smoking areas.

Alpha is doing well

THE article "Micro maker hits trouble" (Computer Weekly, August 11) needs to be clarified so that an improper association is not made between ITCs and Alpha Micro Systems Great Britain or Alpha Micro Systems, its US parent.

In fact, Alpha Micro Systems, as covered in a previous article, "Alpha users get leg up to mini world" (Computer Weekly, July 28) has just published its first quarter sales and

earnings for the period ending May 31, 1983 and posted a 95% gross rate to revenues of \$10.5 million.

Alpha Micro also announced expected worldwide revenue of between \$45 and \$50 million, with about 20% coming from international operations.

LEONARD PALLADINO
Managing Director
Alpha Micro Systems,
Slough.

The Editor welcomes letters commenting on subjects published in Computer Weekly, or on original topics. All letters must be accompanied by the writer's name and address, not necessarily for publication. Letters may be cut.

Benefits of good spelling

IN your Education and Training special (Computer Weekly, August 4) a cartoon showed terminals queuing for social security.

If they were to request BENEFIT from the SS computers, they may get an English lesson, but not cash.

Having spotted the deliberate mistake, is my prize to be a Giro check? (sic).

For the efficient spread of computer literacy, could we not return to standard spelling?

PHIL LONSDALE

Alvechurch.

Correct level of support

DAVID FERRIS' comments concerning the lack of support from retailers (Computer Weekly, August 4) may be true of the US. In the UK, I believe that the correct level of support is available for the discerning buyer.

Ferris states that data processing people are used to good support. This I know is true, but in a retail situation we are not, in the main, dealing with data processing professionals. A good proportion of our business is to the first-time user of a computer. For this type of client support must be, and generally is, excellent. We are, of course, delighted to supply data processing professionals as they know what they want and the support that they require.

It must be remembered that there are two types of computer retailers. There is the retailer who sells micros and software along with TVs, videos and music centres that advises, demonstrates, installs and supports.

Possibly Ferris should take a closer look at the support offered by the specialist computer retailers in the UK.

Especially for Unix based Systems

BSL

In most progressive operations, the use of computerised systems is fast becoming a prerequisite to growth and profitability. To bring the considerable advantages of computerisation to every type and size of organisation at a realistic cost, we at Bivius have developed software packages capable of meeting every conceivable requirement in accounting, stock control and order processing. And we've recently added to our widely used existing range with a series of entirely new packages which offer even greater efficiency and flexibility of use.

Product and customer support is the hallmark of our success and all Bivius packages carry a three-month warranty as well as round-the-clock back-up service. We also produce non-standard software, either to your exact specification or purpose-designed by us following consultation with you. We can offer you a computer system that will perform virtually any business requirement and at a cost that will bring all the advantages of the more advanced computer within your reach.

If you would like further information on any of our standard software packages or would like to discuss special requirements in more detail please contact us today.

Training council to tighten up on grant fiddles

THE Manpower Services Commission (MSC) is frustrated with the attempts of some computer training companies to abuse its scheme of grant aid towards courses.

As a result the coming year's programme, due to begin this month, will be much more tightly controlled, according to Gordon Ewan, director of Cosit, the Computer Services Industry Training Council.

Cosit is responsible for distributing MSC grants for computer training and for developing new grant aid programmes. Ewan says that plans for next year are not yet complete. The money available will be about the same, although it will be distributed very differently.

MSC support has been provided this year at the rate of up to £20 a day, a sum which companies sending staff on training courses can claim back. But, according to Ewan, some training companies have been abusing the scheme in their advertising by suggesting client companies could make a profit.

One firm inferred that £100 could be claimed for a course costing £80.

"Such things really get up the MSC's nose," says Ewan.

A more typical case of a small training company falling foul of the MSC is that of North London-based Ditec. The company is offering one-day, three-day and week-long courses on programming micros and running business applications software.

The basic cost of the courses is £95 a day, although the weekly one costs only £195. But Ditec's managing director Diluv Patel claims that some of his courses are eligible for the £20 a day MSC grant.

The courses are fine enough and probably will be eligible for MSC grant, but, Ewan points out, somewhat to Ditec's inconvenience, the courses are still awaiting approval. In any case, the company is jumping the gun slightly since it has not yet been considered for next year's scheme, beginning this month.

Patel says that one of the conditions for grant approval next year will be that the training company belongs to Cosit. Ditec has duly joined, and Patel expects approval soon.

Enough of controversy. On the positive side Ditec is making a bold attempt to cut out jargon and

write simple training manuals to cover the course topics.

This is quite a feat since English is not the first language for most Ditec staff. There is one English person, along with a Thai, an Indian, someone from Japan, and Diluv himself, who is a Ugandan.

Patel employs a consultant of impeccable credentials to check the manuals, Bob Tweedy, who was a member of the Alvey Committee set up to recommend a UK response to Japan's fifth generation initiative.

One of Ditec's single day courses covers the popular micro database development package dBase II from the US company Ashton Tate.

This package is bugged by a thick jargon riddled manual which Ditec has reduced about six-fold in size and translated into short, easily comprehensible English. The company's accounting course is similarly accompanied with a booklet introducing the businessman to the micro.

The company also writes software, mostly tailored packages using dBase II. Like some other small companies dealing with software, Ditec has launched a scheme to introduce people to the micro.

PATEL... Cutting out the jargon from the manuals.

Local businessmen, or anyone interested in learning the basics, can phone and make an appointment during two afternoons a week with the Islington office for £3.75 an hour.

Staff will teach a little Basic programming, or show the customer what can be done with software packages.

Pay data scrambled at time of writing

IBM mainframe users can pay confidential data from their inquisitive programmers with software written by a Peterborough consultancy. The software overwrites the company's payroll packages and scrambles data as it is written on to magnetic disc.

Passwords have been used for many years to stop all and sundry knowing what everyone earns. But until now there has been no way to stop the programmes inside with a system from digging up confidential data by dumping it to file, according to Nick Cox, technical director of Peterborough Software.

"As far as we know this is done in the UK," says Cox. "It's something the industry has overlooked."

Dongles for small computers much talked about as a means of encrypting data to make it undecipherable. These are small pieces of hardware that sit between a micro and a disc or cassette to keep the information as it is written back and decipher it when it is read back into the computer.

Peterborough Software has achieved the same effect with code.

"In the IBM mainframe environment we are out in a position to put in hardware amendments. It has to be software."

In conventional data protection, Cook explains, an experienced programmer can write a small program to get a print of the file and glean the information by perusing the dump which will be in octal or hexadecimal code.

"With our files you end up with gobbledygook."

Cook admits that the company's cipher technique is not unbreakable. "But it would be a damned good person who breaks the code."

And if the code is broken, Cook continues, it can quickly be changed with the new version included in the next release of the software. The company is considering changing the code regularly.

The code software comes with the company's Unipersonal and Unipersonal packages and will also be available with Unipersonal. The cost of the packages depends on the number of employees to be catered for. Unipersonal costs about £5,000 for about 750 employees.

Cook will naturally not tell how his code works. But he says that it is not based on the well-known technique called the Data Encryption Standard published by the US National Bureau of Standards in 1977.

Slow standards create bad language

COMPUTER languages, like spoken languages, are living things, adaptable to the changing environment. How is it, then, that the bodies that set standards for languages can get away with such sluggish work?

In the case of Cobol, proposals for screen management vital for speedy input of data will not become part of the definitive standard set by the American National Standards Institute (ANSI) until the mid-1990s at the present rate of progress. Yet the facilities concerned have already been implemented in some form on many computers.

A notable exception to this torpidity is the case of Ada, the real time language which emerged from the US defence community to take on Pascal, Coral 66 and others for live applications like process control.

ANSI has been quick off the mark and given Ada a standard before full working compilers have been available.

Cobol has suffered most from slow development of standards. So much that a member of both ANSI

and the international Codasyl body that decides how the language should develop and recommends changes to ANSI recently suggested that something should be done.

Jerry Garfunkel - brother of singer Art - suggested that standardisation be split into two phases. There would be a long term revision cycle every ten to 15 years, punctuated by development modules every two years.

And ANSI has made a move which indicates that this august and austere body realises it is not

much good having language standards lingering a computer generation behind the times.

It has set up a Study Group on Programming Languages with a first meeting scheduled for August 31. The idea is to try and standardise the standards. The group will look at how guidelines applicable to a specific language can be applied to all other languages.

It will also look at links between systems languages such as database, graphics and operating control with the high level languages such as Fortran and Cobol.

Wise effort to bring women into computers

NEXT year will be a Wise Year for women in science and engineering.

A Wise (Women In Science and Engineering) campaign will be launched at schools and industry in September in an attempt to bring more women into high technology. At present only about a quarter of computer science graduates are women, and the ratio becomes still less favourable as you move up through the hierarchy of computer companies.

So far the campaign has only been outlined, and firm details will come after initial responses from letters to schools and industry.

There will be two thrusts: a local campaign aimed especially at schools and small firms in the area, and a national public awareness programme.

Wise is a joint venture funded by the Equal Opportunities Commission and the Engineering Council. The Commission is staging a conference in November to discuss the problems of poor female representation in high tech.

Meanwhile the Engineering Council is funding two smaller individual projects. It is giving £10,000 for a one-year research project to look at the reasons why girls at secondary schools are not taking up computer studies.

The other project is to develop

material for a women's only computer course designed to be as unmathematical as possible.

It has been suggested that girls do not take up computer classes at secondary schools because they are swept aside by stampedes of micro-mad boys. This problem could be solved by girls-only classes - one option being considered by Wise.

But this would not alleviate the boredom that still overcomes many girls at the sight of a computer terminal. A more fundamental change of attitude will be needed to make girls want to work with computers, and this will be an aim of Wise Year.

The Engineering Council has also issued a statement and policy booklet urging closer co-operation between industry and organisations running engineering degree courses. The council advocated two new types of degree: the enhanced three-year course for the main body of engineers, and an extended four- or five-year course. The "enhancement" is the addition of design, possibly computer-aided design, as well as an introduction to business methods.

The extended course would be for the top 10 to 20 per cent of students.

Sorry if you were puzzled

MY postbag has been bogged down with correspondence from readers who have spotted mistakes in solutions to two Puzzlers which appear at the foot of this page. Our most recent blunder caused a multitude to complain that the solution as published was impossible - as indeed it was. A printing error had added a line to the Japanese puzzle of the August 4 issue.

We also had a fat postbag pointing out that our solution for the June 23 Puzzler, although correct, was not the only one.

Two points arise, apart from our own fallibility. The first is, where do all our readers find the time not only to do the puzzles, but to write to us and complain when the answers are wrong?

Incidentally, it is surprising how many of the letters come from staff of big organisations such as IBM, ICL and British Telecom, where it seems there is more time available.

The second point is that many problem solvers are writing computer programs to accomplish their task, when a little human wit would be much quicker.

Workplace is compiled by Philip Hunter

PUZZLER

THEORY has it that ten square tiles, having respective side dimensions of 3 11 12 23 34 35 38 41 44 and 45, can be placed together to form a surface to form a perfect rectangle.

This week's problem is (a) to work out what the size of that rectangle must be; and (b) to determine how the squares will fit in relation to each other.

See page 47 for solutions.

GRRR!

Rapid Recall

When Digital designed the flagship of their LSI-11* bus range, they packed in quite a plus - that's a massive 4 Megabytes of machine memory. That lets you run top end minicomputer software like RSX11-M* Plus and RSTS-E* and of course RSX11-M* and RT11* on the extended 22 bit LSI-11* bus. And that's a first for a micro based system in this price range. But if you're worried about grabbing a tiger by the tail, don't. The PDP-11/23* Plus is handled by Rapid Recall. Phone them today and you'll go wild about their prices and ex-stock deliveries - plus all the support you need to master your system from day one.

Women in a familiar promotional role: Will Wise Year change anything?

PEOPLE

Sponsoring refugee work in Sudan

FELTHAM-BASED GCS Engineering is helping to sponsor a Sudanese schoolboy who flew out to the Sudan on Sunday to undertake a year's refugee work teaching local children in remote villages. As well as contributing towards his travel expenses, GCS has supplied him with a camera and a shortwave radio-cassette system which will be of use in teaching.

The 17-year-old schoolboy, David Hawkins from Cowbridge, South Glamorgan, has recently won a place at St Anne's College, Oxford University, where he will read psychology starting in 1984.

Until then his trip to the Sudan is being made

under the auspices of Project Trust, a charity set up in 1968 to enable young people to experience living and working overseas.

In looking for sponsors, Hawkins spotted a GCS Engineering advertisement which prompted him to write to the company.

GCS Engineering managing director, Bill Nickall was impressed by Hawkins' positive ideas. "It is rare to find such good sense and determination in a 17-year-old today," he said.

Nickall is seen presenting Hawkins with his camera, radio cassette and cheque.

Hawke Electronics announces the appointment of John Lythall, 35, as managing director. He takes over from company founder David Griffin, who is to pursue other business interests. Griffin's association with Hawke remains in a non-executive directorship capacity. Lythall has been the company's technical director for the past seven years.

Mohawk Data Sciences has appointed Mike Edwards manager of key accounts. He will be responsible for managing the existing customer base in Southern England. Previously a sales executive with Mohawk's Southern region sales force, he first joined the company in 1978 as a sales support executive.

Peter Ferrigno has been appointed customer services manager with Burroughs UK, after 16 years at IBM. He will be responsible for all of Burroughs UK systems services staff located in six regional centres around the country and handling the full range of Burroughs software.

Shaun O'Reilly has been appointed general manager of Rhone-Poulenc Systems, a Duostable-based company specialising in the microfilm, drawing office and computer media market. O'Reilly, 38, joined the company in 1979 as administration manager before becoming finance and administration manager and then director of finance and administration.

John Kelly has joined Pragmas as sales engineer with special responsibility for the company's range of Chromatics colour computers and displays. He was formerly with Dicoil Electronics as a senior technical sales engineer.

System Industries, supplier of disc and storage systems for Digital Equipment and Data General minicomputers has set up a Benelux office and formed a wholly owned subsidiary in the Netherlands. It has appointed David Taylor as regional sales manager, Benelux. He was previously sales manager with Arsyscom and a systems analyst with Logica.

Rex Blegg (below) has been appointed sales and marketing director of DVW Microelectronics, the Coventry-based manufacturer of the Husky portable microcomputer. He has worked for Prime Computer since 1976, most recently as managing director of Prime Computer Services AG in Zurich.

Ex-ICL man Jobo Gould (above) is to head a new software and systems company, Transaction Point. The Reading-based firm is supplying ICL computer users with software and consultancy in distributed computing. Gould, 37, was previously a senior manager in ICL's Reading offices where his 100 strong department was employed in the development and use of distributed computing technology.

Keith Harpham is now a director of Datasolve, the computing services subsidiary of Thorn EMI. He was previously general manager, commercial products.

Audiogenic, a software company has announced five promotions and appointments. Anne Foster is named as international sales manager, and has been elevated to the Audiogenic board of managers. Henry Smithson has been appointed new product manager and is now responsible for evaluating the potential of all new software. He has also been promoted to the board of managers. Susan Allan joins the company as sales support co-ordinator. Richard McDonald joins as full-time company accountant, and David Middleton, previously with Commodore, has been promoted to product development manager after eight months with the company.

John Jackson (above) has been appointed chairman of London-based Quorum Computers, which was formed when former management and staff of Q1 Europe bought the business. The new company, which employs 40 people, is engaged in the development, manufacture and marketing of a user microcomputer network office information application markets throughout the UK and Western Europe. Jackson, formerly chairman of Q1 Europe, director of Philips Electronics Associated Industries, Ltd. Group and Satellite Television.

Lynne Young has joined National Advanced Systems (Europe) Corp. as marketing services manager. She will be responsible for co-ordinating marketing services, organising conferences and seminars, internal and external communications. Previously she was the marketing and public relations manager for AVX, a copiers manufacturer.

William F. Asprey Jr. will join the staff of the Charles Babbage Institute this summer as assistant director. The Institute is devoted to encouraging the study of the history of information processing. Asprey was taught in the mathematics department of Wilkes College and in the history of science department of Harvard University. He has served as an editor for publications on the history of computing.

Peter G. Tagg (above) has been appointed managing director of Image Systems Ltd, of Bournemouth, the UK subsidiary of Image Systems Inc, of California, a supplier of microfilm retrieval systems. Tagg, a qualified engineer, comes from a marketing background in the electronic computer industry.

John Kelly (above) has been appointed managing director of DVW Microelectronics, the Coventry-based manufacturer of the Husky portable microcomputer. He has worked for Prime Computer since 1976, most recently as managing director of Prime Computer Services AG in Zurich.

[THE KEY* TO SUCCESSFUL SOFTWARE SALES]

Earl's Court,
London.
June 5-7, 1984

Certainly the major software event of 1984 will be **Software '84**, to be held for the first time in Central London. **Software '84** will be totally dedicated to professional software sales and will be held from 5-7 June 1984 at Earl's Court in the centre of London, the Nation's biggest commercial market place.

Such a show could only come from a company that understands the computer market. Reed Exhibitions, the country's largest exhibition organisers, will be staging **Software '84** with all the skill the company has already brought to the highly successful Compec shows.

Computer Weekly and Software* will be sponsoring both the exhibition and the prestigious conference, running at the same time, guaranteeing a high level of interest in both events.

Inevitably, top quality business visitors will be drawn to such a show, with DP professionals, dealers, OEM's and serious business and professional end-users all visiting the exhibition with nothing but software purchase at the forefront of their minds.

With that kind of captive audience you can't afford not to be a part of this important event. So turn the key to the booming software market and make **Software '84** the key to successful software sales. The first step is to fill in the coupon below:

* In association with Systems International, Practical Computing, Micro Business & Computer Talk

Please send further information on:

EXHIBITION AND CONFERENCE

DIARY

AUGUST 24-SEPTEMBER 21
Introduction to Database Management, using dBASE II, City Technology Centre, London, £45.00 including lunch. Details: 01-739 8856.

AUGUST 30-SEPTEMBER 2
The second International Conference on Database, organised by the British Computer Society and universities of Aberdeen and Cambridge, takes place at Churchill College, Cambridge. Details: Peter Hammersley, Middlesex Polytechnic, London N11 2NQ.

AUGUST 31-SEPTEMBER 1
Improving Programmer Productivity is a practical workshop for trainee programmers with basic language training and initial experience. Run by BIS Applied Systems, it is to be held at the Park Court Hotel, London, and costs £270. Details: Cherry Bignore, 01-261 9237.

SEPTEMBER 1
Computer Open Day Exhibition, Ladbroke Dragnora Hotel, Leeds, 10am-6pm.

Are You Leaving Your Career to Chance? P. Herquet, Electronic Recruitment Company, University Centre, Mill Lane, Cambridge. 01-739 8856.

SEPTEMBER 5-8
IBM Cobol Review, a course organised by Altego Education, takes place in London. Aimed at inexperienced Cobol programmers, it costs £450. Details: Altego Education, 01-836 9303.

SEPTEMBER 6, 7
BIS Applied Systems is running the course, Team Management Leadership, for newly appointed project or team leaders. It will be held at the BIS Training Centre, London SE1. Cost is £285. Details: Cherry Bignore, 01-261 9237.

SEPTEMBER 7-9
Implementing and Operating Local Area Networks is a seminar organised by Frost and Sullivan. It takes place at the Mount Royal Hotel, London, and costs £425. Details: Carolyn Budd, 01-486 0334.

SEPTEMBER 14, 21, 28, OCTOBER 5, 12, 19
Computer-aided Circuit Design is a short, advanced pick-up course organised by Coventry Lancaster Polytechnic. Course fee is £60. Details from Carolyn Hall, (0203) 24166.

SEPTEMBER 15, 16
Microcomputers to Banking is an international seminar to be held in Luxembourg. It is organised by Société des Poires Internationales de Luxembourg, Rue Alphonse, Welker, 2721 Luxembourg-Kirchberg, BP 110, L2011 Luxembourg.

Reducing Human Error in Computer-based Systems is a Frost and Sullivan seminar at the Park Lane Hotel, London. Price is £385.

SEPTEMBER 14, 15, 16
Office Automation and Integrated Information Processing Support Systems is a Frost and Sullivan seminar taking place at the Hilton Hotel, Amsterdam. Cost is £425. Information from Carolyn Budd, 01-486 0334.

CONFERENCES

If data dictionaries have failed to live up to expectations it is probably due to a lack of understanding of the cost/benefit profile, and poor acceptance by development staff resulting from unsympathetic management of their implementation. How these problems can be overcome and the ground laid for increasing automation of the system development process, is considered by David Gradwell in his presentation of Pergamon Info-tech's two-day tutorial, Data Dictionaries - Realising their Potential. The third morning of the tutorial, already presented to over 150 delegates in London and Copenhagen, takes place in London on September 20-21. Fee is £360+VAT. Further information from Pergamon Info-tech, Maidenhead (STD 0628) international +44 628 39101.

SEPTEMBER 20-21
The Computer Science and System Division of UK Atomic Energy Authority, Harwell, and delegates will be accommodated in the colleges of Magdalen, St Katherine's and Mansfield.

Keynote speakers from IBM's development laboratories will be headed by Jim Casagovino, manager, program development, data systems. A feature of the meeting will be a VIP Day to which the senior computer management of selected installations will be invited. Non-member installations may also be invited. More information on 0235 24141 x3230.

IWP's first event of its autumn programme is a workshop for existing and potential word processor users designed to show how productivity gains can be made through the direct interface of word processors to other input and output devices. It will be held on September 29 at the City Conference Centre, London. Cost to IWP members is £65, non-members £85.

SEPTEMBER 26-28
The fourth annual computer-based training seminar and conference organised by the National Computing Centre will be held from October 11-13 at the Ladbroke Dragnora Hotel, Leeds. The seminar fee is £127.77 (including VAT) per delegate per day. Further information from Kathy Owen on 0611-6332.

SEPTEMBER 26-28
The fourth annual computer-based training seminar and conference organised by the National Computing Centre will be held from October 11-13 at the Ladbroke Dragnora Hotel, Leeds. The seminar fee is £127.77 (including VAT) per delegate per day. Further information from Kathy Owen on 0611-6332.

Fraud is not the only computer crime fashion

Ken Wong singles out logic bombs, arson, sabotage, theft and vandalism as popular crimes

COMPUTER fraud is the glamour crime of the 80s.

The computer aids and abets villains to milk large sums of money from organisations by exploiting loopholes in accounting systems.

What other crimes are possible on computers? Are they serious enough to warrant management attention to take positive action on crime prevention, detection and contingency planning?

The 1983 edition of the BIS Computer Crime Casebook compiled by Ken Wong and Bill Farquhar reviews over 60 documented UK cases of arson and bombing of computer centres, sabotage of equipment, data, programs and service, malicious damage and vandalism of equipment, theft of portable equipment and components, theft of information, programs, tapes and discs, as well as illegal penetration of timesharing services.

Over 50% of the total reported cases occurred in the last two and a half years and a significant number incurred serious losses to the victim organisations.

The casebook is available for £20 from Judith Lewis, BIS Applied Systems, York House, 199 Westminster Bridge Road, London, SE1 7UT.

ARSON and bombing culprits ranged from a security guard, a works fireman, a caretaker and other disgruntled employees, or ex-employees and outside vandals to IRA terrorists. Of 12 cases reported, damage was incurred by fire, smoke, water or explosion. Individual losses ranged from £13,000 worth of equipment destroyed to £8 million of damage to buildings and contents, with an average loss of £1.2 million.

The popular times fire setting fire to equipment and premises appeared in the early hours of the morning with Saturdays and Sundays being the most favoured by arsonists. As a rule such were the times when the premises were unmanned and most vulnerable to attack. The fires and explosions were generally started in areas outside the computer room.

One publishing company suffered an arson attack on its VDU room, resulting in damages to equipment, files and work in progress in excess of £700,000. Two years later another fire was started in identical circumstances in exactly the same location, and the company incurred a similar amount of damage.

In the cases of the security guard and the caretaker, both had free

access to all areas on the premises and both were trying to prove to others their determination to protect company property in times of crisis for want of a better cause.

In fact the guard genuinely felt that his brave attempts to fight the fire would probably be rewarded with an honour from the Queen. The works fireman was practising his fire fighting skills by setting a waste bin alight. Unfortunately, on all three occasions the fire got

One publishing company suffered an arson attack on its VDU room, resulting in damage in excess of £700,000

out of hand and heavy losses were incurred by the employers.

These and other cases have demonstrated the need for vigilance in access control and security patrolling at night, together with proper planning for disaster recovery in order to speed up resumption to normal operation and to mitigate business interruption losses which are likely to escalate if processing disruptions become extended.

Then there is the problem of logic bombs. Five cases of logic bombs emerged over the last few years, being planted by programmers, a credit controller and software vendors. Most logic bombs tend to work on the basis of implanting a time fuse in the coding.

Continuous working of the software necessitates the date of de-

letion to be regularly moved forward to another future date; otherwise the fuse will set off the illegal coding planned on the due date to overwrite the application software and data, causing chaos to the installation.

In fact logic time bombs are frequently adopted by software vendors in their application packages leased out to client companies as a means to safeguard their software investments.

At the end of the lease, if the client reneged from payment or refused to renew the leasing, the software would be programmed to come to a halt on the due date, or self-destruct with possible corruption of other related program and data files.

In the case of the contract programmer who was asked to develop a payroll program with the promise of a permanent position on completion, the company withdrew their earlier promise and asked the contractor to leave when the program was proved to work.

A month later the program suddenly stopped working and emergency manual procedures had to be applied to pay the employee. Upon spending many hours poring over the coding, they found the programmer had inserted some illegal code in the program to ensure that the payroll would not be processed unless his name was first located.

Covert sabotage raised its head 12 times, on computer equipment, data, application programs and software as well as the service network.

The sabotage on equipment was carried out by operations staff in each case, either because the culprit was bored and frustrated, or in order to earn overtime payment for running jobs on a remote standby machine.

In the latter case the total overtime earning came to £687 but the total cost of machine failures to the company was estimated to be £500,000.

He simply opened the computer's back panel and used a screwdriver to make light scratches on printed circuit boards to cause short circuiting and other malfunctions. The most pathetic case was one of causing system failures so that the shift leader on the night shift could go home early.

Apparently the company was operating a go-home-if-it-breaks rule for the night shift. In most of these cases the victim companies expended vast efforts and resources to determine the cause of failures while bearing the burden of re-runs and processing delays as well as the resulting disruption to business in the meantime.

Only by a long process of elimination, following exhaustive testing of hardware and software to check for possible faulty components and coding, and diligent scrutiny of shift rota, were the likely culprits pinpointed and the crime proven with the subsequent installation of surveillance equipment in secret.

The wisdom of single manning for night shifts could well turn out to be false economy, when risks of sabotage are likely to arise from culprits on unsupervised duties which could result in dire consequences.

There were two cases of tape librarians wreaking vengeance on their employers, by damaging valuable tape files through either running a biro on the initial 23 feet of tape, or snipping off a similar length from the tape and concealing it in the computer room floor roid.

On both occasions the crime was committed during the period of the termination of employment. The need for swift action in termination procedures for disgruntled employees cannot be overstated. This applies especially to those holding sensitive positions.

Ideally, the employee should be escorted out of the premises upon given notification of termination and paid in lieu of the period of

notice. If formal grievance procedures applied and must be followed, then the suspected culprit should not be asked to handle any further sensitive tasks and immediately denied access to terminals, files and computer equipment. Security codes and keys should also be changed.

There was one crime of passion by a programmer who attempted an ingenious approach to date his ex-employer's female operator by corrupting her software in order that he would be consulted to fix the fault. The story had a sad ending. The lady in question had chosen to go out instead with the system engineer who was called in to diagnose the computer failures.

The culprit was not prosecuted but was asked to give up undertaking not to cause further trouble to the company. He succeeded in connecting to the ex-employer's computer via a dial-up terminal to corrupt the programs because the system passwords were never changed. Such practice would be inviting trouble from both disgruntled employees and ex-employees.

Straightforward acts of vandalism and of operators wreaking

havoc to computer equipment and magnetic tapes were reported 11 times. Such attacks included hitting equipment with an axe bar, damaging a disc drive and pouring orange squash on the fixed disc, resulting in irreparable damage to the storage media, as well as kicking and smashing VDU equipment with a hammer.

All the cases of vandalism happened at night while the installations were unmanned and criminal damage resulted from computer break-ins. These cases highlight the need for the installation of intruder alarms to protect computer premises as well as locking computer rooms in the hours of buildings to keep equipment safe from outside prying eyes.

The two cases involving operations staff included one of a mentally deranged operator attaching a disc drive with a hammer and another of rowdy behaviour in the computer room after a drinking session, with the culprit standing on an important field tape and causing damage to the loader.

The second case has served to emphasise the need to enforce stringent access control procedures in computer areas. The institution's poor housekeeping was also partly to blame as field tape should never be left lying on the floor.

The last few years have seen a dramatic increase in equipment burglaries, including one armed robbery for a large stock of microcomputers. Seven out of the 13 cases reported occurred in the last 12 months.

With every effort of semiconductor vendors to miniaturise electronic circuitry, computer equipment has shrunk in size and weight over the years and the increased portability has contributed to the recent trend of computer theft, as has the proliferation of business micros in unprotected office areas.

In some cases, the thieves appeared to be equipped with a shopping list for the crime and only took away the items "to order". In one or two cases, where the victim was a software house, it was suspected that the real criminal intent was to obtain the source code of some highly successful software packages developed in-house.

Fraud is not the only felony now in fashion . . .

Continued from page 16

appeared to be equipped with a shopping list for the crime and only took away the items "to order". In one or two cases, where the victim was a software house, it was suspected that the real criminal intent was to obtain the source code of some highly successful software packages developed in-house.

The equipment theft was used merely as a camouflage. The case of the armed robbery was for 3,000 Sinclair Spectrums and the evidence strongly suggested that the criminals had obtained inside information and possible collusion from employees.

There was one case reported of a cheeky thief who walked into a university department and enquired of the students which one of the microcomputers kept there had the most storage. On being pointed out the right equipment, he placed some manuals on top, unplugged the computer and walked off with it in broad daylight, completely unchallenged by anyone around at the time.

The same crime was then repeated in another part of the country. Again this case has demonstrated the need for improved access control and increased security awareness of computer users to guard against this type of bravado escape.

Another case of break-in saw the thieves locating the access control magnetic card left in a desk in an office and used it to gain access to other parts of the premises in order to remove computer and office equipment. Again the need for safe custody of access control cards and keys should be strongly impressed on all card and key holders.

Of nine cases reported involving the theft of programs, printouts with customer details and computer tapes and discs, more than half were due to victim companies failing to appreciate the risks of ex-employees removing such assets on leaving their employment.

The information removed was then offered for sale to the employers' business rivals. The most widely reported theft case was that of the ransom demand of £275,000 for the safe return of 540 tapes and 48 disc packs taken from a Dutch installation and its backup storage location.

The attempt was foiled by detectives seconds after the briefcase allegedly containing the money was snatched from a company executive in a street chase in London, before the culprits had time to open the case to examine its contents. If they had, they would have been very disappointed.

Apparently, the company had heeded the advice of Scotland Yard and stuffed the briefcase with the equivalent in weight of Playboy magazines in place of the ransom money.

Many organisations using word processing equipment do not appear to keep back-up copies of tapes or floppy discs on or off-site. Loss of the prime copies of files through fire damage or theft, or sabotage by disgruntled employees could cause serious havoc to the users concerned.

Recently some programs were allegedly stolen from the Police National Computer Centre and the case is still being investigated. One bank employee was bribed with £5,000 to steal the bank's access code for its computer systems. The implication in both cases smacks of serious criminal intent and points to the need for safeguarding any sensitive information which could be highly coveted by the criminal world.

Several cases of system penetration were reported on groups of school boys and university students using dial-up terminals to get into a commercial timesharing bureau and some university computers.

Passwords were illegally obtained from users with the object of acquiring free computer time. In one case the polytechnic lecturer actually instructed his students to break into the operating system to get into one of his files, called MARKS, in order to pass the examination.

Of the various types of computer crime outlined, how many of these can happen in your own organisation? It is easy to read about horror stories and games of folly happening to others. It is no laughing matter when it occurs on our own premises. Many of the crimes can be prevented by prudent management action and improving the security awareness of computer users.

Capital expenditure on access control equipment and fire protection need not be high to provide an adequate level of protection for company assets. Good security procedures and personnel management would help to alleviate heavy losses by early detection and risk prevention. Unless we take positive action the problem will simply not go away by itself.

One arson was begun by a works fireman who wanted to practise his fire-fighting skills.

The Key Specialist Event in the Computer Year

Sponsored jointly by the Peripherals Suppliers Association and 'Systems International', Peripherals '84 has justifiably been named the *only* specialist show for computer professionals.

Through a massive publicity campaign using all the key systems development publications, Peripherals '84 will attract a record number of visitors from purchasing/specifier sectors of this continually expanding market. Attendance in 1983 was up 25 per cent on 1982. And 1984 is all set to be the biggest and most successful to date.

This is the buyer/specifier confrontation of the year. Don't miss it.

How to Book Your Stand

This is the key specialist event in the Computer Year - ACT NOW - for further information telephone Ian Hardman, Sales Manager on 01-661-3022.

PSA members are eligible for a preferential stand rate. If you are not already a member and would like to know more about the association's aims and objectives phone Mr Michael Perry on 0908 668118. Provided you become a member before the opening of Peripherals '84 you can claim the special members rate.

For more information return this coupon to Ian Hardman, Peripherals '84, Room L216, Quadrant House, The Quadrant, Sutton, Surrey SM2 5AS.

Distribution of computer crime cases.

WONG Compiled over 60 cases of crimes.

No doubt IBM's disc manufacturing facilities are geared up to be ready to take advantage of the growth in personal databases.

The relational database is coming of age — at last

The data processing manager's dream of simple, effective systems is approaching reality, as Phil Manchester reports

DATABASE management systems have long been touted as the answer to the data processing manager's prayer. All of a company's data, entered only once and accessible to all who have the authority to access.

This has been the dream. Unfortunately, the reality has often fallen short of the marketing jargon and database implementations have consistently failed to live up to what was expected of them.

A major obstacle has been the growing complexity of database structures, coupled with the need to expose end-users more and more to the data.

The relational database model is an attempt to get around both of these problems by first simplifying the structure and secondly making it appeal to end-users.

The simple, tabular structure of relational database models is certainly easy enough to grasp. Like the central idea in popular spreadsheet programs (Visicalc, etc), the view of the data seen by the end-user is a series of tables containing rows and columns.

In old fashioned filing systems,

Despite the extraordinary advances that have been made in hardware design and performance, machines are still not that good. The total relational database has yet to be achieved

the rows would correspond to records and the columns would correspond to data fields attached to those records.

The physical representation of the data does not have to correspond to this tabular view, however, and this is where the problems begin.

Within a corporate database, many different views of the data will require support. This means, in essence, that no assumptions can be made about the physical structure of that data — and it may be stored in any way that the

DBMS authors wish.

This leads to considerable performance problems, because, theoretically, every piece of data requires a complete search of the whole database for it to be accessed.

Despite the extraordinary advances that have been made in hardware design and performance, machines are still not that good. The total relational database, as originally envisaged by its inventor, Edgar Codd, has yet to be achieved.

This has not stopped IBM and others implementing parts of the idea and the justification for limited implementation of the concept is nowhere better put than in IBM's recent announcement of a relational facility for its large MVS users.

It goes like this: "For operational systems, highly related data structures are needed. The hierarchical model of data is appropriate, as the relationships required can be built into this model in advance."

"IMS/VS and DOS/VS DL/I are IBM's database products for

year by the release of a similar facility for customers using the fashionable VM operating system (or environment).

The announcement last month completed the hat trick, giving both MVS/370 customers and the few MVS/XA customers their own version of the relational model.

Together with the database management software (DB2) the announcement also reveals two other products, one of which continues the trend started with SQL/DS (the DOS/VS relational model) and another which reveals a change of emphasis by IBM.

In the former case, the relational database is still to be built up using an extraction process.

One of the major criticisms to come from independent database vendors when SQL was launched was that the relational database was only achieved by extracting information from existing DL/I databases.

Once the extraction process had taken place, any further updates to the original database would, therefore, not be reflected in the relational version.

The simple technical reason for this is that with medium to large databases, the overhead would be far too great. As mentioned earlier, the simple structure of the relational database is too time-consuming to maintain.

So if the DL/I database is thought of as a movie, then the extracted relational database is a still photograph.

As IBM argues, the applications of the relational model (such as Decision Support Systems) require different data characteristics to those demanded of operational databases.

Whereas operational databases are relatively stable structurally, allowing the attributes to be predefined and geared to getting performance out of them, decision support databases need a dynamic structure that can be adapted to suit their current purpose.

This was followed earlier this

the name of Query Management Facility (QMF) and is described by IBM as "an interactive program, which has been specifically designed for use by business professionals with data stored in DB2 (the MVS relational database) and SQL/DS (the DOS/VS).

As IBM points out, QMF is "more than just a query/report writing tool". Not only does it allow supposed business professionals (presumably those who are engaged in real business as opposed to playing with computers) to "manage" their query processing and database manipulation, it also allows them to juggle the data around.

QMF apparently contains facilities to update the relational model, using what is called "data creation" and "data modification". The latter is "to permit the effects of 'what if' type questions to be answered easily".

The implication is that business professionals will have the power to build and alter their own databases.

As it is safely remote from the main corporate database, there are no problems of security of integrity within the personalised database.

It effectively becomes the responsibility of the person using it. In fact this is not a new concept. IBM database people have been talking for some time about "owning" data within databases and providing multiple user views of the same data.

With QMF and the simple relational model, it appears that this idea has come of age.

"These facilities provide an excellent decision support aid. By working on a separate copy of the data, information can be changed; allowing the effects of these changes to be evaluated," says IBM.

This sentence, more than any other in IBM's announcement literature, sums up IBM's current attitude to database technology.

What's more, it lifts from its

corporate shoulders a burden that it has carried since it became evident that IMS would not do what was intended, ie create a database for all seasons.

As part of the general trend toward giving end-users in customer companies more of a say in how data processing power is used, it reaffirms IBM's position as the fountainhead of knowledge.

In effect, you can't have one without the other. If your company executives want to play with

seniority going to those having the biggest databases.

No doubt, IBM's disc manufacturing facilities are geared up to take advantage of the growth in "personal" databases.

The only disincentive, certainly for the foreseeable future, is the price of the new products. To buy the three products outright it will cost a cool £20,000, with the monthly rental standing at about the cost of an IBM PC with a few frills (£3,400).

It may transpire that the size of an executive's database will act as a sort of status symbol, with seniority going to those having the biggest databases

the woodruff relational database, then the data processing department has to set it up, using the heavily DP-based IMS system (which in turn is guaranteed in perpetuity).

Most other approaches to relational database technology rely on only one database, managed in such a way that the diverse user views can be maintained without creating a separate copy.

Presumably, such systems would have to go through some similar process of abstraction to provide the kind of facilities that IBM is touting with QMF, though ways of avoiding this can be imagined.

Of course, in providing "business professionals" with the facility of "owning" their own databases and juggling around with them as much as they like, IBM also stands to make a killing in selling disc storage.

It is difficult to see a situation where these hypothetical business professionals will be content to have only tiny databases with a limited amount of information. They will probably want the lot.

It may even transpire that the size of an executive's database will act as a sort of status symbol, with

seniority going to those having the biggest databases.

MAGISTRATES' ROTAS

How to put the right magistrates in their places

The problems of sorting out complex magistrates' rotas can be easily solved, writes Dr Steve Allen

ANYONE faced with the problem of preparing a rota, whether for school timetabling or for manning oil rigs, will surely recognise the time-consuming nature of the exercise. Many, many conditions have to be taken into account, which leads to the generation of a seemingly unending set of alternative rotas.

There is usually insufficient time to examine all possibilities and out of the set considered it is not an easy task to select the most preferable.

However, powerful computer methods have been developed to assist in solving such problems. The preparation of magistrates' rotas provides a clear illustration of this.

A Magistrates' Court may comprise many court rooms, each with

the development of a computer approach. The system created — known as Magist — was soon being used by a number of courts, simplifying and easing the rota preparation process.

The collection of relevant information from the justices is quite straightforward, using standard forms issued from Scicon via the clerk. The justices indicate on the forms the dates on which they are unavailable.

The clerk adds key details, including each magistrate's eligibility to sit at the various types of court. The forms are then sent to Scicon at Milton Keynes to be processed by Magist.

Magist caters for mixed benches, chairmen for the different types of court, sittings where a certain magistrate must attend, magistrates who cannot sit together and much more. The system then aims to ensure even spacing for each justice between court attendances and avoids putting any pair of magistrates together too often.

As far as possible, each justice is given a balanced spread of sittings at the various types of court, and the overall number of sittings for each magistrate is comparable.

A range of rota tables is provided, giving details of dates of sittings and the types of courts. There is a complete court calendar, in chronological order. Calendars for each separate type of court are also available.

Of particular value to the clerk is the set of dates of attendances for each magistrate, showing the names of his colleagues at each sitting. These are often sent out directly by the clerk, removing the need for costly work at the printers.

Special facilities can be incorporated for courts to meet their specific requirements. For the larger courts, with perhaps 20 sittings per day, a revised format for the input documents has been introduced. This enables the clerk to collect data for morning and afternoon sessions. In return, rota tables can be produced highlighting these sessions.

While court sessions generally occupy a morning or afternoon, there are occasional sittings which take a whole day. Recent enhance-

ments to Magist have included the ability to cater for these all-day courts.

There are occasional sittings which take a whole day. Recent enhancements to Magist have included the ability to cater for these all-day courts.

MAKE A DATE FOR THE UK'S PREMIER COMPUTER TRADE EVENT

The Computer Trade Show '84

Wembley Conference Centre March 13-15, 1984.

Sponsored by Computer Weekly, Practical Computing, Systems International, Micro Business and Software. Organised by Reed Exhibitions.

If you're in the computer business you should exhibit at the Computer Trade Show '84.

The first show in April '83 was universally acclaimed as successful in attracting the right kind of serious visitor — visitors who would mean business for you.

Building on this success, The Computer Trade Show '84 will have an enlarged exhibition area, and a repeat of the highly-targeted promotion used in '83 will guarantee the excellent quality of visitors.

To get further information telephone Chris O'Hea, Exhibition Sales Manager on 01-664 3125 or complete and return this coupon.

Choice of pitch on Bowe guillotine

THE Bowe Company of Augsburg, West Germany, has announced another guillotine, the Bowe 310, in its range of forms handling equipment for cutting continuous computer stationery. The Model 310 will be marketed in the UK by Alara.

The Bowe 310 is a high-performance model at the top end of the range of Bowe guillotines. It can separate up to 25,000 4in forms an hour. Yet despite this performance, improved sound-proofing has reduced the noise emission level to around 70 decibels.

A major feature of the 310 is the ability to switch over from 1/6in to 1/8in feeding on the guillotine. This is achieved by a simple switch. Until now, users had to specify the form feed as 1/6 or 1/8in when buying a machine.

The 310 is available with a range of Bowe accessories such as conveyor stacker, dropping stacker, optical mark recognition margin trim bursters, paper loop control and double blade.

Price of the Bowe 310 from Alara is £8,915. Alara (CW), Iwergh Avenue, North Circular Road, London NW10 7UJ. Tel.: 01-965 9311.

The Bowe 310 guillotine.

Half-height Winchester

THE Microcomputer Division of Storrom Electronics has launched the Model CM4213 half-height 5 1/4in Winchester disc drive of 13.34 Mbytes from Computer Memories Inc. It is the same size as the half-height floppy disc drive, and said to be of particular benefit to OEMs and systems integrators needing high capacity storage.

The high capacity-to-space ratio makes it suitable for use with desktop and portable computers.

The half-height drive incorporates the technology of Computer Memories CM6000 series of 40, 26 and 13 Mbyte 5 1/4in drives, offering the half-height 13 Mbyte drive and an average access time of 75msec. The drive also features a low 15.5 watt power consumption.

Sinrom Electronics (CW), 14 Arkwright Road, Reading, Berks. Tel.: (0734) 875464.

Up to 111 megabytes with new disc family

A NEW high-performance family of 5 1/4in Winchester disc drives, announced by Priam (Europe), features a 32ms access time and storage capacities ranging from 55 to 111 Mbytes.

Designated the 500 Series, the Priam discs are said to be suited for application in high-powered workstations and space-limited multi-user systems.

The 502 model has four discs storing 55 Mbytes; the 504 has six discs storing 86 Mbytes. Both

are compatible with the ST412/506 interface. The 503 and 505 models have higher recording densities to get 71 and 111 Mbytes of formatted storage capacity, on four and six discs respectively. These two drives feature on-board data separation, and will be available with Priam and Ansi interfaces.

The 502 and 504 specify a 0.925 Mbyte/sec transfer rate and 9.212 bits/inch recording density; similar specifications for the 503 and 505 are 0.806 Mbyte/sec and 11,886

bits/inch respectively. Several companies and industry groups recently proposed an Enhanced Small Disc Interface (ESDI) standard, but many major manufacturers feel that too many ambiguities exist to accept it. It is improved and contains so many deficiencies that several companies originally proposing ESDI are having second thoughts. A statement by William J. Schroeder, president of Priam, and James S. Torsion, president

of Kober, "The need for an interface standard that can be supported by the entire industry is abundantly clear. The Ansi standard we are supporting has several advantages over the proposed ESDI standard." They announced that their respective companies are proceeding with the development of several new compatible products incorporating the Ansi standard. Priam Europe (CW), Reading, Berks.

Desk-top micro doubles as development support system

A MULTI-PURPOSE desk-top microcomputer that carries its own "toolbox" for software development has been announced by Motorola. It doubles as a development support system and an advanced dedicated microcomputer for OEM applications.

The system utilises the latest 16/32-bit microprocessor, the MC68010. Known as the VME/10 Microcomputer System, it is intended for systems OEMs who require a complete development system for all Motorola 16-bit and 8-bit MPU/MCU chip sets; for system integrators, to serve as a front-end microcomputer associated with larger external equipment for example in factory automation systems or large complex medical diagnostic instruments; and for OEMs who wish to buy complete microcomputer "engines" and add customised I/O and specially-developed application software to convert these into "turnkey" systems for dedicated applications.

The VME/10 desk-top micro provides a complete range of 8-bit and 16-bit software, hardware and instrumentation development support; carries sufficient memory to allow multitasking and multi-programming; and provides built-in multi-mode graphics hardware and offers a 15in video display as standard features (optional on many competitive systems).

The basic system consists of three interconnected physical elements: the system control unit, the keyboard, and the 15-inch video display unit.

Other operating programmes include edge trimming with single and double alternate cut. Features of the £3,800 guillotine include a buffer memory which stores the last program setting after power disconnection and a safety plexiglass cover to prevent access to moving parts while the FIMA 1000 is in operation.

Bell and Howell Business Equipment Division (CW), 33/35 Woodthorpe Road, Ashford, Middlesex TW15 2XJ. Tel.: (07842) 51234.

For the trim office

FIMA 1000, a microprocessor-controlled desk-top continuous stationery guillotine for small to medium-volume computer users has been launched by Bell and Howell. Due to its quiet operation, the FIMA 1000 is said to be suited for use in an office environment or word processing applications.

The electronic controls offer a range of operating modes from straightforward edge trimming and cutting to sophisticated programmed operations where the continuous stationery is slit in half - with one half cut into separate documents and stacked, while the

other half is fan-folded, still in continuous form.

Other operating programmes include edge trimming with single and double alternate cut.

Features of the £3,800 guillotine include a buffer memory which stores the last program setting after power disconnection and a safety plexiglass cover to prevent access to moving parts while the FIMA 1000 is in operation.

Bell and Howell Business Equipment Division (CW), 33/35 Woodthorpe Road, Ashford, Middlesex TW15 2XJ. Tel.: (07842) 51234.

Monitoring and alarm system

A LOW-COST microprocessor-controlled monitoring and alarm system providing surveillance and control for mainframe and peripherals has been launched by Vikingshaw Products. Offered at a fraction of the cost of conventional units, the CMS is easy to install, update or modify, says Vikingshaw.

The CMS will monitor and display a wide range of faults and conditions ranging from defective computer power supply, including voltage and frequency, to chiller malfunction, air conditioning variations, lighting and fire alarms. It can also be used in conjunction with a card lock system for security.

A remote panel permits the operator to cancel and accept alarms, and allows interrogation and fault analysis.

Using condition monitoring techniques, the system ensures that all plant and equipment is operating within specified parameters. In many cases it can be programmed to control automatically units such as boilers, fans and heaters to keep them within pre-set limits.

For areas such as computer rooms, which can be unmanned for long periods, the system operates an automatic dialling system. In the event of a breakdown, or the plant exhibiting unusual operating characteristics, the CMS will dial any specified

The monitoring and alarm system from Vikingshaw.

number to arouse key personnel. Based on the latest microprocessor chip, the unit permits continuous sampling of 512 points as standard, with full alarm and display facilities. Extra circuit boards increase the unit's capacity in multiples of 512.

Vikingshaw Products (CW), Osborne House, 12 Mount Ephraim Road, Tunbridge Wells, Kent TN11 1BB.

Independent Computer Engineering (CW), Littleton House, Littleton Road, Ashford, Middlesex TW15 1UQ. Tel.: (07842) 47271.

Networking package

A TOTAL networking package for the newly-launched Epson QX-10 is announced by Independent Computer Engineering.

The heart of the network package is the established range of ICE hard disc units, available with 5, 10, 20 or 42 Mbytes of formatted storage.

Independent Computer Engineering (CW), Littleton House, Littleton Road, Ashford, Middlesex TW15 1UQ. Tel.: (07842) 47271.

Modacs V is designed for use both as a stand-alone process system or as a satellite unit. Modcomp (CW), Eskiote Road, Wokingham, Berkshire. Tel.: (0734) 698888.

The AM-302 printer from Alpha Microsystems.

The AM-302 printer from Alpha Microsystems.

Letter-quality printer

ALPHA Microsystems (GB) has announced the latest addition to its growing family of peripheral components, the AM-302 letter-quality printer which, it claims, can handle almost any word processing job, including correspondence, reports, labels, camera-ready text and multi-part forms. It can accommodate almost any paper size, including single-sheet, fanfold, and 1 to 5 part forms, in widths

from 3 1/4in to 16 1/2in. "One reason the AM-302 is so versatile is that it offers something most printers don't - dual plastic/metalised print-wheels," said Michael Oliver, director of marketing. "The wheels are easily interchangeable as well." Alpha Microsystems (GB) (CW), Berkshire House, 56 Barchal Street, Slough, Berkshire SL1 1PY. Tel.: Slough 821921.

The Modcomp V from Modcomp.

Modcomp's mini in the micro price range

MODCOMP has announced its new high-performance product. The single board Classic II/15, a powerful microcomputer system available in the microcomputer price range; Modacs V, an intelligent computer designed to control industrial processes; Modacs II, a data acquisition and control subsystem; and the 1485-X disc subsystems, a line of low-cost disc devices.

All will be available for shipment in October. Chairman Gabriel A. Reisz said: "The new products will be completely compatible with our existing systems while offering attractive price performance for a multitude of demanding applications. We don't want customers to invest time and money in our products without knowing whether they will still be useful in a few years. With our products line, both their software and hardware investments will be protected."

The Classic II/15 is the smallest member of the Modcomp Classic II family and one of the most technologically advanced. The system is designed to provide the fastest response time of any microcomputer on the market today, and has both remote operation and diagnostic capability. The computer is expected to be used for data communications, scientific and industrial applications, plant management, and laboratory functions. It is priced from \$8,500.

Modacs V is designed for use both as a stand-alone process system or as a satellite unit. Modcomp (CW), Eskiote Road, Wokingham, Berkshire. Tel.: (0734) 698888.

Basic Programmers

Nottingham & London

£9,000 to £11,000

Cambridge Data Limited (CDL) is a leading software house specialising in the supply of turnkey systems for the clothing and allied industries.

Their product range incorporates a wide variety of commercial applications e.g. Factory Production Control, Accounts, Stock Control and Order Processing, for CPM based multi-user micro computer systems.

To continue their policy of expansion CDL wishes to recruit additional Programmers for Nottingham and Central London.

You will have a minimum of eighteen months programming experience in BASIC and a knowledge of microcomputer systems.

Make a name for yourself with HUNTERSKIL South

We are looking for additional people who have energy and initiative to expand the CONTRACT Programming/Operating business. The rewards are high and an initial basic salary and guarantee will be offered to the right candidates. The potential for professional growth is high. Your application will be treated in the strictest confidence. Please contact Nick Gill on 0828-75551 or send your CV to HUNTERSKIL South, Chatsworth House, The Broadway, Maidenhead, Berks SL6 1LY.

The HUNTERSKIL Group

BASIC + Programmer

Cambridge

£7,500-£13,000 aae

Our client is a well established firm of Chartered Accountants with offices located worldwide and throughout the UK.

Their Data Processing centres operate a wide range of System and micro computer systems, supporting both internal commercial and customer applications.

The Programmer will have a minimum of 18 months BASIC + experience gained in a commercial or financial environment.

Initially, the Programmer will be responsible for writing programs from specifications but will move into an Analysis role after a qualifying period. In addition, he or she could be expected to travel to locations throughout the UK to assist users on the utilisation of the computer systems.

The salary is negotiable depending on experience and qualifications. For further details ring Knight on 01-491 4706 quoting ref YY160.

Single User Systems Applications Programmers

SERC has set up a Common Base Programme to provide a highly integrated scientific/engineering single-user workstation environment based on the ICL PERQ for its research community. The PERQ offers a high quality A4 display, good interaction via a tablet and 3-button puck, and 24 Mbyte of local disc storage as well as significant cpu power. At present, software in the Common Base consists of a 32 bit virtual memory UNIX operating system, Fortran 77 and Pascal compilers, and the GKS graphics system. Communications for PERQ (X25 and Cambridge Ring Local Area Network) are under development, and PDP 11/70 and VAX 11/750 computers running UNIX are available as central backup machines.

The aim of the project is to provide a full range of basic software; current work includes window manager research and development, provision of a full-screen editor exploiting PERQ features, print servers, and high quality text processing, as part of a programme to improve the user interface. Programmers are required with a range of experience. Knowledge of UNIX is not essential, but would be an asset. Applicants must be able to demonstrate sound programming practice and have interest (and preferably experience) in development of devices such as PERQ, with their high potential for good quality graphics and interaction, and hence vastly improved user interface.

Applicants should have a degree or equivalent qualification in a scientific, mathematical or engineering subject.

Appointments will be in one of the following grades depending on qualifications and relevant experience:
Higher Scientific Officer £7,149-£9,541 Scientific Officer £5,682-£7,745

Some assistance with the expenses incurred in house sale/purchase may be available.

The Laboratory is a friendly community with its own restaurant and sports facilities nearby. We offer excellent working conditions and benefits include a local transport service and generous holidays.

Application forms are available from: Recruitment Office, Personnel Office, Rutherford Appleton Laboratory, Science and Engineering Research Council, Chilton, Didcot, Oxon OX11 0QX, or telephone Abingdon (0235) 445435, quoting reference VR 135.

Technical information is available through Mrs S. Mitchell, Ext 5631.
Closing date for applications: 8th September 1983.

Sales Executives-rise to this challenge!

MAJOR ACCOUNTS SALES

NORTH OF ENGLAND

5 FIGURE BASIC SALARY

SUBSTANTIAL GUARANTEE

£25,000 TARGET EARNINGS

COMPANY CAR OR CAR ALLOWANCE

Since its inception over 15 years ago, the company has invested a higher percentage of income in product research than any other major computer manufacturer. This commitment has resulted in a steady flow of innovative and ingenious processors, peripherals, software and services. Further recent product releases and a sustained annual growth rate of over 20% have determined the need for continued expansion of their Major Accounts sales team.

The requirement is for a **SENIOR SALES EXECUTIVE** to work from their Northern Major Accounts Headquarters in Manchester. The successful candidate will need to prove at least 3 years of high level sales achievement in any of the following areas:

- Major Accounts
- Distributed Data Processing
- Mini/Mainframe Systems
- Large Turnkey Solutions
- Computer Services

Can you rise to this challenge? If so **ACT NOW!** - for a completely confidential discussion telephone 061-236 1157 during business hours or Evenings and Weekends until 9.00 p.m. telephone **JEFF WALTON** on 061-962 0002 or **DAVID EASTON** on 0270 580129

Alternatively complete the quick response coupon or write to him with full details quoting reference CWP/691 at Plessey Controls Ltd, Sopers Lane, Poole, Dorset BH17 7ER.

PLESSEY

(5087)

WHAT COMES FIRST PRODUCTS OR PEOPLE?

With Ericsson the answer is both. By always putting people first, Ericsson has established some of the most user-friendly products in the world. The resultant success of these products has meant ever increasing opportunities for more people within the marketing and support organisations. So in the case of this advertisement, the successful products have come first.

Ericsson has the products, the financial backing and the R & D resources to maintain the lead in the race to meet the world's rapidly developing demand for Information Processing Systems. A demand that requires a further increase in staff so that the best products continue to have only the best sales and service teams behind them.

Ericsson Information Systems Limited - part of the international telecommunications giant, Ericsson, and pioneer of ergonomically designed terminals - has won universal acclaim for its advanced, highly versatile, Alfascope multi-function workstation. Over 100,000 have already been installed world-wide with the majority connected to IBM computers. The quality of multiple host emulation, together with the multi-function capabilities, such as word processing and personal computing, place Alfascope well ahead of the field.

By the end of the decade Ericsson Information Systems aims to be the leading supplier of office technology and information processing systems in the world. But it cannot be achieved without the right people. The kind of dedicated staff that see the value in investing their future in a rapidly expanding company, and of course in the rewards to be derived from that success.

Negotiating at senior level and meeting the high standards of product knowledge and professional competence that Ericsson executives expect for applicants to extend this team. Experience preferable in terminals, peripherals and/or computer systems.

Ericsson is now seeking a Regional Sales Manager and nine Alfascope Executives to be based in various locations, together with Field and Commissioning Engineers to augment the already established national network. This requirement is just part of the general trend of expansion within the company.

REGIONAL SALES MANAGER
£27,000 per annum

The successful applicant for this position will work with a product with enormous sales potential. He will have the kind of drive and personality that enables him to lead and co-ordinate a highly professional team of sales executives as well as meet the demanding standard of product knowledge which Ericsson customers expect. An income package will be in the region of £27,000 per annum.

SALES EXECUTIVES
£25,000 per annum

Applicants for these appointments will be capable of negotiating at all levels. Their technical competence must be accompanied by the confidence which comes from at least two years' proven success in selling data terminals or related products to major companies. It is unlikely that anyone under 25 will have the technical and business acumen we are seeking. The income package will be around £25,000 per annum with potential for much more. Sales Executives will be based in London, Stockport, Bristol and the Midlands.

FIELD ENGINEERS

Sales personnel will have the back-up of experienced Field Service Engineers who Ericsson regard as a key component in the general sales success of the company. Opportunities exist for applicants to extend this team. Experience preferable in terminals, peripherals and/or computer systems.

Qualified candidates should apply in writing by sending career details to Mike Bateson, Marketing Director, Ericsson Information Systems Ltd., Swan Office Centre, 1508 Coventry Road, Yardley, Birmingham B25 8BN. Alternatively telephone Richard Jackson on (01) 322 3442 or Mike Green on (01) 707 3050, nighttime (01) 397 6636, or use the coupon to request an application form by post.

I am interested in applying for the position of:

☐ Regional Sales Manager

☐ Sales Executive

☐ Field Engineer

☐ Other Marketing or Technical Support positions

This is an excellent opportunity for you to become involved on the ground floor of an expanding department. Company benefits are good and include a substantial bonus scheme. REF. A/3104

Technical Services
Assistant
[Systems Analysis]

up to £11,511 [under review]

British Gas Corporation [HQ] are among the leading offshore operators adopting computerised process control for their storage and reproduction process.

They therefore require a Technical Services Assistant to ensure the effective and efficient operation of all computer systems, including guidance to staff as to the selection and use of computer systems and software. He/she will be responsible to the Control and Instrumentation Engineer for the development of both software and hardware for process control, alarm and monitoring systems.

He/she will ideally possess a Diploma in Computer Science, or degree in a numerate discipline, together with experience of systems programming, mini and micro-computers, and software development projects.

Salary will be in the range £9,952 - £11,511, currently under review.

This position carries the range of benefits normally associated with a large and progressive organisation.

To apply, please write with full career details, and quoting reference number REA/S12301, to: Senior Personnel Officer [HQ Services], British Gas, 59 Brynaton Street, London W1A 2AZ.

BRITISH GAS**Technical**
Manager

- large-scale banking systems
London Excellent salary

In meeting the challenges of international banking throughout the 80s, Chemical Bank is currently embarked on an aggressive strategy of international branch automation. This involves IBM System 38, Database, integrated banking and communication systems, and microcomputer-based networked trading systems, utilising leading-edge technology.

We now require a Technical Manager to co-ordinate the design, development and programming of new data processing applications for the Bank's Overseas Branch System, and to provide technical guidance to Project Management and programming resources.

A minimum of 5 years' systems design and programming experience is essential, together with at least 3 years' experience of IBM System 38 facilities and technical attributes. A degree-level qualification is also required.

A highly competitive salary will be commensurate with experience, and a valuable benefits package includes profit-share scheme, mortgage subsidy, personal loan scheme, BUPA, interest-free season-ticket loan and, if appropriate, assistance with relocation.

Please apply to writing with full details of age, qualifications, experience and current remuneration to the Personnel Manager, Chemical Bank, Chemical Bank House, 180 Strand, London WC2R 1ET.

Developing the Automated Office with a Major Computer Manufacturer

Today's job market presents a bewildering assortment of opportunities to employ your skills in this universally accepted software technology and you will certainly want to ensure that you keep up-to-date with the latest developments in this expanding area of the computer industry. Nowhere are these technologies evolving faster than in the dynamic Office Automation market where data processing, word processing and communications integrate and converge.

We are the European subsidiary of a major North American Corporation recognised as a world leader in digital technology. Due to expansion in our business and product range, we have established a European Development Centre based at our Headquarters in South Hertfordshire to undertake development of a whole new generation of systems products for the European market. During the last few months we have attracted some of the most talented and creative individuals from all over the country and we are now in a position to offer a number of outstanding opportunities to experienced Software Development Engineers in order to complete our R & D team.

The structure within our development centre encourages the opportunity to enhance and develop your skills by working closely with a multi-disciplined, highly motivated team. Our new location is attractive and offers first-class facilities to ensure that your contribution is visible and valuable.

There are a host of reasons why you should talk to us about your next career move. Quite simply, we are convinced our environment provides the best possible platform for developing your skills. Our flexible attitude to salary and benefits means that we are genuinely prepared to offer salaries commensurate with your experience.

To find out more and to arrange a prompt interview, please call **Alan Carnell** or **Steve Stark** on **01-935 0671** (24 hour answering service) or in the evenings and at weekends 01-871 0338.

£15-£25,000 P.A.

T.C.R. are seeking to expand their range of Advertising and Recruitment Services to the Data Processing Sector by the addition of a number of Consultants. The people we are looking for will be able to demonstrate a good track record in permanent or contract recruitment with experience in computer services or systems and programming. Probably aged between 25 and 35 the successful candidates will have a good level of education and possess the interpersonal skills necessary for these challenging and rewarding positions. A very high level of income is envisaged for those with the ambition and determination to succeed, the remuneration package consisting of basic salary, commission, guarantee bonus, health, car plan and company car where appropriate.

MIDLANDS OPPORTUNITIESALL LEVELS
£8-£16,000

There are currently a wide and interesting range of opportunities for systems and programming staff in the Midlands. We have been requested by our clients to locate SOFTWARE DESIGNERS, SUPPORT STAFF, TEAM LEADERS AND ANALYST/PROGRAMMERS with a minimum of 12 months' commercial experience. The kind of skills required would typically be included in the following: DATABASES, BASIC, BASIC + or + 2, RSTS/E, RSX11M, VAX VMS, HP3000 and utilities, all IBM. If your career is leading nowhere, or you're bored or in a rut a quick call to our BIRMINGHAM office is needed to arrange a confidential discussion and objective assessment of your potential with no obligation.

**Targa Computer Recruitment**6 Liverpool Street London EC2M 7NH
Monaco House Bristol Street Birmingham B5 7AS**INTERNATIONAL CONSULTANCIES
ANALYST/PROGRAMMERS**

£10K-£20K + EXPENSES + TRAVEL

Several of the larger, well-established consultancies are currently undergoing massive recruitment campaigns. Their requirements are as FLEXIBLE as your needs. If you have any three of the following attributes - COBOL, PL/1, CICS, DL/I, ADABAS, IDMS, IMS DB/DC, EASYTRIEVE, VOLLIE, ROSCOE, ADF, TSO/SPF, UFO, MK IV, SHADOW, ADS/O - you could soon be working in this fast and rapidly expanding environment. Obviously the more versatility you can offer our clients, the better the salary they can offer you. At a more senior level, salaries can be up to £20K plus expenses and European travel. These are ideal opportunities for programmers with around two years' experience wishing to expand their knowledge, as extensive TRAINING will be provided. If you're interested in getting out of that day-to-day end-user rut, contact SIMON KONING to discuss these exciting opportunities further.

ANALYST/PROGRAMMERSICL 2900
£9-£16,000

A leading consultancy/software house whose main areas of work involve management services staff. An ICL 2900 background with VME/B, VME 2900, TPMS and IDMS would be ideal but also of interest are Data General and HP3000 experience. The work would be both interesting and rewarding with some of the largest companies in the UK as clients. Current projects include work within the public sector, government systems and systems software development using CAFS ISP. A minimum of two years' experience is required together with the personality to match a technically challenging environment. You will be encouraged to assume as much responsibility as you can handle, giving a high level of job satisfaction. The company will offer a competitive salary in line with your background and a comprehensive range of benefits - they believe in career development and will regularly review salary and status.

CHAPMANSStationery, Paper & Print
Office Supplies & Equipment
Computer Supplies
Janitorial Systems**ANALYST/PROGRAMMER**to £9K + Relocation Assistance
Herefordshire

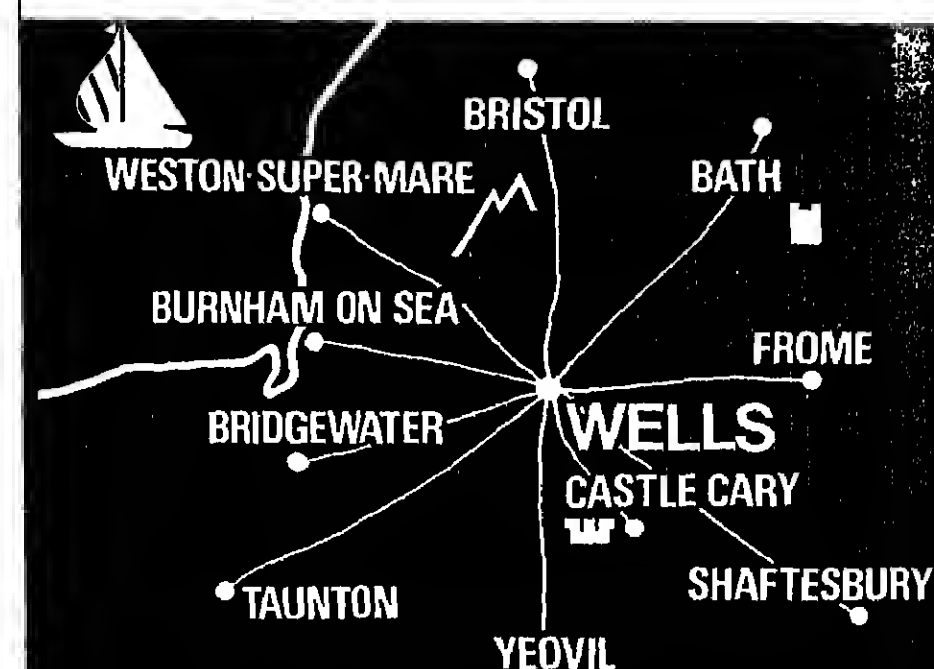

This is an interesting position with technical challenge and career prospects in a most beautiful country town setting.

The position requires good technical ability and experience, preferably gained in an HP3000, COBOL, IMAGE environment, although applicants with other experience and sound commercial programming skills will be considered.

As the second person in this DP Department, which has plans for an impressive programme of developments, you would be required to communicate with users, produce specifications, write, test and implement programs, and generate the necessary documentation. This must be achieved with the minimum of supervision and the successful person will have the capability for deputising in the absence of the Data Processing Manager.

The Company, part of a large Group, is a national supplier and distributor of an exceedingly wide range of office equipment and stationery supplies. The success of the Company is undisputed, and a programme of development including the doubling of turnover within three years has just commenced. For the right people there exists real prospects for career development within the Group.

Applicants for this position are invited to write with CV or request for an application form to Paul McBurney at the address below, or telephone him on 0905 611512 office hours or 0905 611645 evenings and weekends.

Computer Personnel & Executive Development Associates Limited,
Old Bank House, Bank Street, Worcester, WRI 2EW.**SOFTWARE PROFESSIONALS****COULD YOU DISPLAY THIS DATA?**

We've just been selected to produce a new range of computer driven data display consoles. It is one of the challenging projects we are currently working on at Wells.

If you are an experienced Graduate Analyst, Software Designer or Programmer, have a proven record and seek to widen your experience we would like to hear about you.

We are looking for people with 3 to 10 years' software experience, (though we also have some vacancies for well qualified recent graduates). Your experience should be in methodical design of modular real-time software for minicomputer systems or microprocessor firmware development.

We offer good future prospects in both military and civil fields at this expanding site, coupled with large company benefits. Salaries are competitive according to qualifications and experience. Assistance with relocation expenses will be provided where appropriate.

Why don't you find out more about the exciting possibilities of living and working in Wells, at the foot of the Mendips and on the edge of the Somerset levels, by phoning (0749) 72081 or writing for an application form quoting reference CW/336, from Mr F. M. Taylor, Assistant Personnel Manager, THORN EMI Electronics Ltd, Communications Division, Wookey Hole Road, Wells, Somerset BA5 1AA.

**THORN EMI**
Electronics
COMMUNICATIONS DIVISION**COUNT ON YOUR FUTURE IN ANALYSIS**

With Mecca Bookmakers' young professional team in Central London. The Company has a well established IBM 4331 installation under VM/CMS and are leaders in their field with an imaginative development using a dual 8066 C.T.1 momentum system driving digitisers and Prestel-type screens. In addition, they are using IBM PCs linked to the 4331 as management work stations.

They are now looking for someone who can co-ordinate the future development of their accounting systems. The successful applicants will have a clear knowledge of accounting concepts and either a formal accounting qualification or several years accounting systems implementation experience. You will also have the ability to design systems from scratch and implement them.

The Machine Experience is not important, but good communication skills and a facility at user liaison, training and education is, so if you are an experienced professional and want a salary to **£12,500** plus all the normal large company benefits.

Then for an application form and early interview, contact:
Computant Limited (Recruitment Agency),
14 Mount Pleasant, Tunbridge Wells, Kent.
Tel: (0892) 35712/3/4. 24 hours answerphone.

Computant**Senior Programming Staff — System 34 and 38**Starting salaries up to £12,000
WEST LONDON

Lyons Tetley, one of the UK's leading food manufacturing companies, is highly successful with turnover in excess of £150 million.

We seek additional experienced senior programmers to meet a continuing, expanding demand for increased computer applications.

We use System 34's and 38's with numerous on-line systems throughout the operational and administrative functions of our very large food manufacturing, marketing and distribution business, based in Greenford, Middlesex.

Candidates should have 3 to 5 years RPG programming experience on System 34 or 38. The ability to design on-line systems integrating a number of activities, to work on your own initiative and to communicate clearly to both technical and non-technical staff are essential.

Opportunity to work in JERSEY for 12 months

The most senior position involves designing the overall computer system for one of our subsidiary companies in Jersey and spending the working week on the island for up to 12 months.

We can offer you a lively environment, a well established department and the usual benefits expected of a large company, including relocation assistance, where appropriate.

Please write with a detailed C.V., or telephone for an application form, to: Liz Elder, Head: Office Personnel Manager, Lyons Tetley Limited, 327-347 Oldfield Lane North, Greenford, Middx. UB8 0AZ. Tel: 01-578 2345, ext 502.

Lyons Tetley**SHOP FLOOR DATA CONTROLLER**

Cossor Electronics Limited, part of the worldwide Raytheon Group, has an established and expanding market position in the developing electronics technology of ground radar, airborne avionics, communications and computer processing systems.

We are currently seeking a person experienced in the techniques and philosophies of a modern high technology electronics production unit to plan, initiate, and implement data collection routines, to support an integrated computerised manufacturing control system. This is a 'ground floor' opportunity for a person of the right aptitude. Likely experience will include production control, the planning/work measurement side of Production Engineering, and a good understanding of computerised work systems.

An enquiring and agile mind, with a 'user friendly' personality is essential. Some formal qualification in Business Studies, or Computer Science would be of positive advantage.

The job will require a tactful but firm approach to achieve the task time scales in the introduction of real change into an established environment.

The position offers a good salary and a range of attractive benefits which include very positive assistance with relocation if necessary.

Please send full details to:

Phyllis Cole, Personnel Department, Cossor Electronics Limited,
*Freeport, The Pinnacles, Harlow, Essex CM19 5BB**COSSOR**

Thinking for tomorrow

SOFTWARE ENGINEER

Air Call is an International Computer and Communications Service provider which makes extensive use of 8 and 16 bit microcomputers in both data processing and control modes.

A vacancy has arisen within the Technical Services Division of the Company for a systems software engineer to join the Engineering Department.

The position which is based at the Company's technology centre at Dunstable will require a working knowledge of microcomputer hardware, the knowledge of at least one high level language other than Cobol, the ability to program in assembler and a familiarity with real-time operating systems.

The successful applicant will ideally be qualified to degree level and will have the necessary experience and enthusiasm to turn an operational or technical requirement into a working system.

A salary in the range of £9-£10,000 pa is offered and assistance with relocation will be given where appropriate.

Please write, enclosing a c.v. to:
E. A. Milfin, Engineering Manager
Air Call plc
82 High Street South
Dunstable
Beds, LU6 3HD

EXCITING GROUND-FLOOR OPPORTUNITY EXPERIENCED ANALYST/PROGRAMMER FOR NEW DEVELOPMENT WORK HONEYWELL INSTALLATION, COASTAL LOCATION SALARY TO £10,000 A YEAR

Our client, who is part of a light engineering group, is located near the coast in East Sussex. They are starting to develop the company's sales, manufacturing and accounting systems on a Honeywell DPS8, using a mixture of packages (HIMS and HOPS) and in-house programs.

An experienced analyst/programmer is required to work on this project, initially under the guidance of a consultant but eventually on his or her own. There is therefore a chance for a person with initiative to make a positive contribution to the overall direction of our client's systems, and to develop within the company.

The person selected is likely to have a minimum of four years' experience on Honeywell equipment, using COSOL. Some of this experience should have been on a major project in a manufacturing environment.

Please reply, enclosing a detailed CV and a brief letter explaining why you are the person for whom we are looking, to Shubrook Design Limited at:

ALMERS PRIORY (Ref: E0)
ALMERS ROAD

Circa £16,500 + CAR

A leading international consultancy has openings for top-calibre D.P. Professionals who have either good all-round commercial applications experience, or specialised experience in international banking or insurance.

You will need to meet all the following requirements:

1. Good degree
2. Perfect communication skills and professional manner
3. 25 to 32 years old
4. Proven track record, either in a variety of application areas or in international banking or insurance

You will mainly be involved in pure consultancy, but also in project management. This is seen as a logical career step for high fliers who have proved themselves in a user environment and are ready to move forward.

For further information, please contact MARK IRENS quoting reference CW1108/3.

PROGRAMMERS/ ANALYST PROGRAMMERS

System 38 — N. London
to £13,000 + Benefits

Planned expansion into new business areas has meant a 100% increase in turnover for the U.K. subsidiary of a well-known American insurance group. This continuing growth has necessitated the upgrade from twin System 34s to a System 38. To help bring the software into line with the new hardware they now need to recruit three experienced System 38 professionals.

The senior position calls for an Analyst/Programmer with good technical and communications skills gained within the G.S.D. environment. Previous supervisory experience and some knowledge of financial systems would be an advantage. Programmers should have two years' experience and be looking to develop in a project environment. In both cases candidates must have at least one year's exposure to RPG III on the System 38 and be capable of supporting a widespread user group.

Salary is negotiable according to age and experience and is accompanied by the sort of benefits package normally associated with an international group. The real benefit, however, will be the opportunity to grow with a rapidly expanding company.

Call David Mason Johns today on 01-948 5922 (24-hour answering service) on 01-747 0969 (evenings or weekends) for an application form. Alternatively write to him at the address below. Please quote Ref. B166/CW.

CADsearch

We have great pleasure in announcing the formation of CADsearch, a new recruitment consultancy which specialises in the field of Computer Aided Engineering. Our considerable experience in this market place has enabled us to recognise the very special requirements of both people and companies working in this very sophisticated area of computing. Our typical areas of involvement are CAD/CAM, Robotics, Process Control and FMS, and within these disciplines there are constant requirements for the following:-

- Consultants
- Sales and Marketing Consultants
- Pre and Post Sales Support Engineers
- Technical Support Engineers
- Project Leaders
- Applications Programmers
- Systems Software Engineers

If you are already working in CAD and would like to discuss your next career move or equally, you would like to move into this exciting field, please do not hesitate to contact us either at the office or at home;

CADsearch, London House,
271-273 King Street, London, W6 9LZ.
Telephone 01-741 8011.

BUSINESS ANALYSTS

Mini & Micro Systems c.£10,000
Middlesex/Surrey borders

Our client, a successful international company and acknowledged market leader in its own field of specialist electronics, employs over 2000 people at 40 locations in the UK and abroad. Their young Management Services Department has been responsible for a change in emphasis from controlled batch processing to distributed systems and has installed over 80 such systems from scratch.

Vacancies exist for business analysts with at least two years' experience in programming, systems analysis/design or package implementation. Successful applicants, who should demonstrate good communications skills and a flair for solving business problems, will play a major role in projects based on minis and micros. Reporting direct to the Development Manager, you will be responsible for: user liaison (often travelling to company sites in the UK), definition of requirements, sub-contracted systems and programming work, testing, documentation and implementation.

The benefits are those associated with a major employer.

alpha micro OPENS UP NEW OPPORTUNITIES FOR:

A DEALER MANAGER A SENIOR TECHNICIAN AND TWO TECHNICIANS

THE COMPANY

Alpha Microsystems (GB) Limited, a wholly owned subsidiary of Alpha Microsystems Inc. of America has an outstanding record of success in selling the very best in multi-user micro computers which offer mid-range mini performance.

THE JOBS

DEALER MANAGER: based in Slough the Dealer Manager is responsible for widening the existing dealer network, selling the Alpha Micro range to and through dealerships and managing the Company's business with dealers. The successful candidate will have been in the computer industry for some 10 years preferably in the "mini" sector, and have a proven sales record and dealer, distributor or OEM experience.

He or she will be a top performer who feels bored, frustrated and under-rewarded in a big corporation or who has a dealer background and seeks to work in the exciting environment of a USA manufacturer and the appropriate remuneration. He or she will be a hard working, successful, hungry self-starter who eats Apples for breakfast. Write with full career details to date, to David Ford, General Sales Manager.

TECHNICIANS: We need three highly motivated technicians to be based at our new purpose built commissioning and repair facility in Reading. The successful candidates will have wide experience in micro and mini servicing, ideally with Alpha Micro, DEC or similar equipment.

The rewards will be satisfaction of working with state-of-the-art systems, competitive salaries, company car and the usual remuneration packages.

Write or phone Mike Oiler, European Support Manager, or John Ward:

Alpha Microsystems (GB) Ltd
Medway House 98 Herschel Street Slough Berks SL1 1PY

alpha micro

Data Processing Controller Manufacturing Environment £9,000-£10,000

**Welter
Howard
Designs Ltd.**

This isn't a job for everyone, because working with our client you get to do it all. At least in the early days.

They make and design furniture. And they're very good at it. Sales are around the £5,000,000 mark, they employ ninety people, and they're growing.

The company's partly computerised and aiming to go all the way. The existing installation is an ICL System 10 Mini. It handles sales order processing, sales ledger, dispatch scheduling, inventory control and costing. Over the next couple of years, with your help and advice, they'll be installing a more powerful computer to handle these and other systems like material requirements planning, production control and an integrated financial ledgers system.

You'll have a VDU operator reporting to you and that's it for the moment. You're the computer operator, you run the department and make sure management has the information it needs. You'll also be responsible for the implementation of these new systems.

It's an important job and likely to get much more so. They need someone who can grow with the company and work under pressure.

You will probably be between 25 and 38.

You must be prepared to knuckle down to the nitty gritty and have the ability to expand the department in line with their growth.

Think you could handle it? Then telephone Amanda Dean on 01-549 9236 (24 hour answering service)

Sloangate Recruitment Advertising Limited
Dominic House, 171-177 London Road, Kingston-upon-Thames,
Surrey KT2 6RA. Telephone 01-549 9236

PUBLIC SECTOR APPOINTMENTS

PROGRAMMER

CENTRAL LONDON
£7,578-£9,030

(starting salary according to experience and qualifications)
The LOCAL AUTHORITIES CONDITIONS OF SERVICE ADVISORY BOARD (LACSAB) wishes to recruit a young programmer or statistician to help design, process and analyse pay and manpower surveys; set up information retrieval systems; and provide general statistical advice. LACSAB has eight MB Winchester disc microcomputers linked by private line to a leading mainframe bureau (CDC & IBM). We require a person with at least a second class honours degree. At least one year's programming experience is essential, as is a good knowledge of Fortran and statistics. Experience of standard statistical packages (e.g. SPSS, SIR) would be an advantage.

LACSAB advises local government on manpower matters; collects, analyses and circulates pay and manpower data; and provides the employers' secretariat to the national negotiating bodies which determine the pay and conditions of over two million employees.

For further information and application form contact Mrs Carolyn O'Brien, Research Section, LACSAB, 41 Belgrave Square, London SW1X 8NZ. Telephone 01-235 6081 ext 208. Completed application forms should be returned to LACSAB by 9th September.

(5121)

UMIST

COMPUTATION DEPARTMENT COMPUTER PROGRAMMER

Two vacancies exist for programmers within the above department to assist in the development of teaching software for the B.Sc. course in Computation, a new four-year B.Sc. course in Microelectronic System Engineering and M.Sc. courses. The courses are supported by laboratories equipped with 8080 and 85-11 based work stations running the UCSD Operating System, and duties will involve software maintenance and development of new software tools. In addition, the successful applicants will be expected to assist in the preparation of student projects and in the supervision of laboratory classes.

Applicants should have a degree or equivalent in Computing or a related discipline. Preference will be given to candidates with experience in one or more of the following: Pascal, UCSD COBOL, Operating Systems, High-level Systems Programming, Assembly Language.

Salary will be on either Scale £5,310 to £9,375 or Scale £7,190 to £11,615 depending upon age and qualifications.

Requests for application forms, quoting reference COM/2100, should be sent to the Registrar, Room 01, UMIST, PO Box 88, Manchester M60 1UD. The closing date is 18 September 1983.

(5122)

UNIVERSITY OF LONDON DEPARTMENT OF EXTRA-MURAL STUDIES

BASIC Programming and the RML 3802

Two courses of six meetings beginning 13th October and 24th November at 8.30pm.

BASIC Programming and the RML 3802 II.

One course of six meetings beginning 2nd February at 8.30pm.

Please quote reference MCI.

(5124)

OXFORD POLYTECHNIC

DEPARTMENT OF MATHEMATICS STATISTICS & COMPUTING

A number of Research Studentships are available, leading to M.Phil. (CMAA) in the area of Computer Graphics for Teaching Methods in Statistics and Computing using the Apollo Computer System.

Applicants should normally either have, or expect to obtain, a good honours degree in a computer-related subject. Further details of these studentships and other research in the Department are available from the Postgraduate Tutor.

Salary Scale Researcher A, starting point £4,247.

Applicants should state the project(s) of interest, include a curriculum vitae and the names of two referees and send the applications to: The Postgraduate Tutor, Department of Mathematics, Statistics and Computing, Oxford Polytechnic, Headington, Oxford OX3 9BP. Closing date 21st August, 1983.

(5097)

THE UNIVERSITY OF TASMANIA

Applications are invited for the following temporary posts available from the beginning of the 1984 academic year:

SENIOR LECTURER/LECTURER IN COMPUTER SCIENCE

Applicants should possess a higher degree in computer science, or equivalent qualifications and experience. For appointment at the Senior Lecturer level, candidates must have demonstrated a high capacity for effective teaching and original research. The University of Tasmania is the only university in Australia to offer a wide range of disciplines. It has an established reputation for excellence in research. The Department of Information Science is responsible for teaching computer science in the university and for research in computing. It has been active in the development of PASCAL, a microcomputer-based research programme. The Department is also responsible for the development of programming languages, databases, networking, theoretical computer science, etc. It has a high level of research in research of computer science. The Department would have a special interest in those with a demonstrated interest in hardware aspects of computing, theoretical computer science or knowledge-based systems.

Salary range: Senior Lecturer £9,000-£12,000 p.a.; Lecturer £6,200-£8,200 p.a. Applications should be sent to the Postgraduate Tutor, Department of Information Science, University of Tasmania, Box 2522, G.P.O. Hobart, Tasmania, Australia 7001, at the latest by 1st September 1983. Applications close 26 September 1983.

(4082)

POLICE COMPUTING

SYSTEMS PROGRAMMER

SO1/2 - £9,060-£10,539 p.a.

To work chiefly on the operational systems of the computer project branch based at Force Headquarters in Striford, Manchester.

The Greater Manchester Police is one of the largest forces in the country with a comprehensive programme of computerisation. It is currently developing a number of major systems which will play a significant part in assisting the operational and administrative efficiency of the force. These include a data network linking headquarters to divisions and sub-divisions, message switching, criminal records, personnel, stock control, central ticket office, word processing and other office systems. Other applications planned for the future include command and control, street index and an interface to the Police National Computer.

Applicants should have experience of large on-line applications and have been a shift leader or equivalent.

For an informal discussion phone Mr Softley, Deputy Project Leader, on 061-798 8867 ext. 303.

Application form and further details available from Departmental Management, County Treasury, County Hall, Piccadilly Gardens, Manchester.

Closing date: 2nd September.

The Greater Manchester Council is an Equal Opportunity Employer.

(5093)

UNIVERSITY OF LEICESTER

Computing Studies Unit

LECTURER IN COMPUTING

Applicants are invited for a post of Lecturer in Computing in the Computing Studies Unit. Applicants should have experience in areas of non-numerical computer science, and have suitable postgraduate or industrial experience.

Initial salary will depend on qualifications and experience on the Lecturer's Scale £7,190 to £14,125.

Previous applicants for this post will be considered and need not re-apply.

Further particulars from the Registrar, University of Leicester, University Road, Leicester, LE1 7RH, to whom applications should be sent on the form provided by October 7, 1983.

(5094)

UNIVERSITY OF STRATHCLYDE

Systems/Communications Programmer

Programmer

To assist with data communications development and with writing and maintaining systems software for the VAX 11/780 under VMS. The Unit provides a service to academic and administrative staff and has recently joined the Joint Academic Network (JANET), giving access to other computer networks and research Councils such as the UK, an X25-based Local Area Network is also being developed.

Candidates should have a good honours degree, preferably with experience of VAX/VMS and data communications. The appointment will be for three years in the first instance. The salary will be on the scale £5,310-£9,375.

Further particulars from the Registrar, University of Strathclyde, Livingstone Tower, Glasgow G1 1RH, to whom applications should be sent before 8th September, 1983. Please quote Ref. 5095.

(5095)

University of London Computer Centre

Can you help run a

Communications Network?

Do you have experience of Network Commissioning and Testing, Fault Analysis and Rectification, Packet Switching, Protocols, Mainframe Communications, Lines, Modems, Multiplexors?

If you have, then the University of London Computer Centre would like to talk to you about senior vacancies in the Network Support Group.

The Group is responsible for the management of a large data communications network consisting of numerous Packet Switches using the X25 protocol, many bit-synch connections running HARP and UT200 protocols, eight Packet Assemblers/Disassemblers supporting interactive traffic from London and Regional sites. Connections also exist to the country-wide Joint Academic Network and British Telecom's P.S.S.

The Network serves a variety of large, medium and small host computers, including AMOAH, CRAY, ICL and DEC.

A dynamic and flexible approach is necessary as the work is constantly varying in both type and load.

Applicants should have sound technical knowledge of some of the areas mentioned above and it is likely that the successful candidate will have worked in an Operational environment and will have obtained a recognised qualification in the Communications, Electronics or Computing field.

Salary will be commensurate with age, relevant qualifications and experience, within the range £7,488-£11,438 inclusive of London weighting.

Application forms are available from Mr N. Savage, Assistant Secretary, ULCC, 20 Gullford Street, London WC1N 1QZ. Telephone No. 01-405 8400, ext. 341.

Applications close two weeks after publication of this advertisement.

(5074)

FINANCE

COMPUTER OPERATOR

Salary £5805-£9300 ± 14% shift allowance and £183 local weighting. Reference number CP269.

Applicants are invited from experienced IBM or NCR operators to join the operations team based at County Hall and working a 5-day, 2-shift rate with opportunity for paid week-end and overtime working.

The County Council, an established NCR Criterion user, has recently installed an IBM 4341 using VM, DOS/VSE and CICS to provide the base for future computing requirements. The IBM 4341 supports a rapidly growing network of local and remote terminals and will form the centre of the office automation and information processing projects being developed.

Attractive working conditions in modern offices with good restaurant facilities.

Applications (no forms) giving full details of education and previous work experience, quoting the job reference number, together with the names and addresses of two referees, to The County Treasurer, County Hall, Hertford, by 31 August, 1983.

Hertfordshire County Council

(5171)

Computer Services

Documentation Officer

Scale 3 Salary £5,640-£6,135 p.a.

As part of a three-year development plan, the College is installing a new Digital VAX 11/780 computer and expanding support services to users. A new post has arisen in Computer Services for a Documentation Officer who will be responsible for the documentation produced and held by Computer Services and other related aspects. Word processing, graphics techniques and other technical skills need to be developed.

A prior knowledge of computer and technical writing, newsletter production or publicity will be an advantage.

Application form and further details (send see) from The Deputy Senior Administrative Officer, Nene College, Northampton, Northampton NN2 2AT.

Closing date for applications is two weeks from the date of this advertisement.

(5110)

UNIVERSITY OF STRATHCLYDE

INFORMATION TECHNOLOGY

CO-ORDINATOR

Applicants are invited from suitably qualified candidates for the post of Information Technology Co-ordinator (possible for three years in the first instance). The person appointed will be responsible for the co-ordination, support and maintenance of the University's Information Technology Programme. This will involve research and consultancy links with the industrial and business communities to gather with courses, seminars and workshops.

Applicants should be proponents of Information Technology and its applications, have experience in industry as business, and be able to liaise with senior management in industry and business and with the staff of University departments. Experience in marketing is desirable.

Appointments will be on Grade III (Higher Referee Staff) Scale £5,310-£10,539, USG benefit.

Further particulars are available (quote ref. 5096) from the Academic Staff Office, University of Strathclyde, Livingstone Tower, Glasgow G1 1RH, to whom applications should be sent before 8th September, 1983. Please quote Ref. 5096.

(5096)

GREATER MANCHESTER COUNCIL

An Equal Opportunity Employer

TREASURY DEPARTMENT

PROGRAMMER

Scale 5/6 - £7,191-£12,127 p.a.

Required in the Computer Systems Development Unit which provides a service to meet the administrative needs of the Council's departments; the Greater Manchester Police, Greater Manchester Fire Service, Greater Manchester Probation and After-Care Services and Manchester International Airport. An accurate control and remote computer network based on dual IBM 4341s, IBM 6100 and Philips 7700 distributed processor is in operation.

Applicants should have a minimum of two years' experience of COBOL programming.

Application form and further details available from the County Treasurer, County Hall, Piccadilly Gardens, Manchester M60 3PH. Closing date: 2nd September.

(5094)

GLoucestershire COLLEGE OF ARTS AND DESIGN

Computer Unit, Park Campus, Cheltenham

POST NO. 100010

DATA COMMUNICATIONS TECHNICIAN

Scale 3/4 - £5,640-£6,135 p.a.

Dept. of Mathematics and Computer Studies

Post No. 420101

TECHNICAL ASSISTANT

Scale 3/4 - £5,640-£6,135 p.a.

To provide technical and computer services to the Department of Mathematics and Computer Studies. An extensive programme of Industrial Short Courses.

Application forms and job descriptions from Administrative Officer (Staffing), Gloucestershire College, Gloucester GL1 2EH, may please.

(5097)

POLYTECHNIC OF THE SOUTH BANK

Borough Road, London SE1 0AA

MANAGER INFORMATION TECHNOLOGY CENTRE

Salary up to £14,000 p.a.

The POLYTECHNIC OF THE SOUTH BANK in association with the BOROUGH OF WANDSWORTH is proposing to sponsor, subject to the formal approval of the MSC (under the YTS Scheme), an Information Technology Centre at Menor House, Clepham Common. The Centre will provide work experience and training for young people in micro processor and computer applications.

We are seeking a person with appropriate management experience and with knowledge of relevant production and marketing techniques to manage the Centre. The initial appointment would be for a period of 15 months with the possibility of further extension.

Application forms and further particulars are available from the Staffing Office, Tel: 01-828 8888 ext. 2355.

Application forms should be returned by 31st August 1983 and it is expected that preliminary interviews will be held in mid-September to suit the convenience of applicants.

PROGRAMMER COBOL

to £9,000

An opportunity has occurred for a Programmer with a South London organisation utilising VAX 11/780 for the development of large database systems. They require around two years' commercial applications experience using any structured COBOL, VAX COBOL being especially welcome. Flexi-time working, bonus and cheap pension scheme go to complete the company package.

ALL LEVELS ICL 2900

to £11,000

A rapidly expanding Essex-based company has requirements for Analysts and Programmers through to Team Leader status. ICL experience which may include VME exposure is particularly relevant and at senior levels proven analysis or supervisory skills are necessary. Handling a large volume of the London insurance market, our client would especially welcome financial and insurance applications backgrounds. Benefits include profit share scheme and excellent promotion prospects.

ANALYST/PROGS & PROJECT LEADER

to £15,000

Vacancies occur at various levels for persons with good BASIC, BASIC+, FORTRAN or similar programming backgrounds, preferably backed by working experience in a DEC environment. A proven project exposure involving the building of software for banking systems, data communications or message switching applications is desired as our client has a heavy commitment for development and support in all three areas. An attractive salary range, reviewed at six monthly intervals, supplemented by a generous company benefits package is offered.

ANALYSTS ICL 2966

to £12,000

A major manufacturing company, based in Hampshire, utilising ICL 2966 under VME is seeking several Analysts to augment its development teams. A commercial or financial applications background is required and exposure to ICL hardware is desirable. Every opportunity for advancement is available to Analysts with two or more years' experience within this market leading company.

ANALYST/PROGS BURROUGHS

to £11,500

C. London company is currently looking for Analyst/Programmers to join their expanding team working on a variety of financial applications. Applicants should have around three years' COBOL to include 18 months' exposure to BURROUGHS systems. Any CMS experience will be of particular interest to our client. Successful candidates will enjoy a good deal of client contact and must be professional in both appearance and attitude. Good prospects and working conditions are offered.

SALES SUPPORT LONDON

£14,000+

Expanding company are seeking experienced DP personnel to join their sales/support team. Applicants will probably have spent around eight years in DP, preferably with a manufacturing or accounting applications background, together with some pre- or post-sales support exposure. They should also have feasibility study and project management experience. As well as an excellent starting salary, benefits include a company car or generous car allowance, profit share and an interesting and challenging position.

PROG & SNR PROG HP 3000

to £11,000

Software houses with an excellent reputation in the HP market seeks a Programmer and Senior Programmer due to planned expansion. The senior position requires three years' COBOL with knowledge of IMAGE and VIEW and the junior around 18 months. This is a good opportunity to work on a variety of projects and applications and for the senior the possibility of moving into analysis at an early stage.

ANALYSTS C. LONDON

to £15,000

We have been retained by three London-based companies to find Analysts with varying levels of experience. A sound DP background is required with exposure to pension, payroll, insurance or accounting applications. Two of the positions are particularly interesting as they offer the chance for the Analysts to work in a consultancy role with a good deal of client contact. As well as good starting salaries perks are varied and include annual bonus and mortgage subsidy.

GSD PROG/ANALYSTS RPGII/RPGIII

£NEG

We have many clients, all SYS 34 or SYS 38 users, who have current requirements for Programmers and Analysts. Applicants should have a minimum of six months' RPG gained in a commercial environment through to three years' + for the more senior consultant positions. The companies range from banking to manufacturing and offer a wide variety of benefits.

Computer Science/Engineering degrees essential, plus assembler and/or high level real time language experience. Excellent benefits. Re-location assistance. Ref. 614

Analyst Programmers & Programmer

LONDON SW6 up to £12,779 (under review)
Following a number of internal promotions, British Gas have openings for Analyst Programmers and a Programmer at their London Computing Centre in Fulham.

Commercial systems are mainly developed on an ICL VME 2900 range mainframe computer using structured development techniques and COBOL. Engineering and scientific systems run on a UNIVAC 1100/61. Development projects at the Centre include internal and external networks; application areas currently under development cover stock control, accounting, commercial and industrial contracts, personnel and engineering. System types include batch, on-line and database.

Analyst Programmer

- At least 3 years in a mainframe commercial environment
- Practical experience in COBOL and mainframe job control languages
- Ability to develop programs through all stages (analysis, design, program development and system implementation)
- Experience in structured development techniques.

Programmer

- At least 15 months in a mainframe commercial environment
- COBOL and use of job control languages
- Experience in structures programming

Salaries for Analyst Programmer, between £10,421 and £12,779. For Programmer, between £8,715 and £10,000. (All salaries are currently under review). Benefits are those normally associated with a large progressive organisation.

Applicants should write, giving full personal and career details, quoting the relevant reference number - Analyst Programmer: EP724000/CW; Programmer: EP724001/CW, to: Senior Personnel Officer (HQ Service), British Gas, 59 Bryanston Street, London W1A 2AZ.

ANALYST/PROGRAMMER

IBM S/34 & S/36
EUROPEAN TRAVEL

Molex is a fast growing multi-national manufacturer of electronic components, with its European headquarters at Aldershot. We have offices in all the major European countries to sell and distribute our products. Each office uses an IBM System/34 to handle commercial and accounting applications. We have plans to enhance existing applications; write new applications; to upgrade some to the System/36; and, to provide a telecommunications link-up.

We require an experienced analyst/programmer to help us in the achievement of these ambitious plans. Though based in Aldershot, he/she will travel to Europe frequently, sometimes at short notice. The ideal applicant will have proven experience in the design, programming and implementation of complex System/34 applications in RPG II. In addition, he/she will have a capacity for hard work; be self-motivating; and diplomatic.

The starting salary for this position is negotiable and will be commensurate to the experience of the successful applicant.

Please write, enclosing c.v., to:
Miss Jan Drake, Molex EML, Church Lane East, Aldershot,
Hants GU11 3ST.

COMPUTER OPERATIONS CONTROLLER

Negotiable Salary - SWINDON

If you answer to the following questions as yes, then I could introduce you to one of the most professional and respected companies in the world.

- 1. Can you motivate and manage staff?
- 2. Are you able to communicate with all levels of personnel including senior management?
- 3. Do you have the ability to specify, develop, and amend operating system procedures?
- 4. Are you familiar with the latest Data Management techniques?
- 5. Do you have practical experience of accounting systems?
- 6. Do you have effective use of report generating packages?
- 7. Do you have a knowledge of job streamlining, data maintenance or network design?

If you've answered with flying colours I will tell you that our client is an international company and household name in the consumer food industry. Their current requirement is for a first-class Operations Controller to have overall responsibility for all computer personnel and operations. In addition to a very attractive basic salary you will receive all the fringe benefits usually associated with a position of this calibre. We have a confidential discussion regarding this vacancy (telephone 0772 211088 9 a.m. to 5 p.m. Evenings: 060304).

Long term projects in the USA

Up to \$50,000pa

More than simply one of the largest and most successful software consultancies in the USA our client makes it their business to match unequalled expertise with a variety of DP projects. From design to implementation, they achieve success after success, in the face of tough EDP problems. The tougher the EDP problem, the more definitive their solutions.

Isn't that the sort of consultancy you'd like to be associated with? A 'consultant's consultancy' in every way. Working with an impressive list of 'blue chip' companies and major government agencies in a wide spectrum of diversified project areas. Superb in-house training keeps you one step ahead of accelerating technology in an environment which demands the highest level of ability.

Our client is currently seeking DP professionals to undertake long-term projects based in the North Eastern part of the USA.

THE NATIONAL BOARD FOR NURSING, MIDWIFERY AND HEALTH VISITING FOR NORTHERN IRELAND OPERATIONS SUPERVISOR/ TERMINAL OPERATOR

Salary Scale: £5,670-£7,404 (A & C Scale 1)

Applications are invited for the vacant post of Operations Supervisor/Terminal Operator with the National Board.

The National Board will in October operate an on-line computer data base shared with the National Board for England, Scotland, Wales and the United Kingdom Central Council in London, using IBM main frame computer. The role covers the functions of equipment expertise (computer, terminals and telecommunications) and operational services (data handling and control). Local equipment is microcomputers providing batch and on-line VDU facilities.

The job will require control of local schedules and timetables, when appropriate, in liaison with staff from the central computer group, plus local demonstration of computing consumables and supplies.

Essential attributes for the post include skills in computing (eg previous operations or programming work), manual dexterity and the aptitude to work with equipment and the ability to get on with user staff and management.

The post is based at the offices of the National Board in Belfast.

Application forms and job specification may be obtained from: The Chief Executive Officer, The National Board for Nursing, Midwifery & Health Visiting for Northern Ireland

TECHNICAL SALES SUPPORT VIDEO DISPLAY TERMINALS

Bealve, a leading manufacturer of video display terminals, needs a technical sales support person. This individual must be self-motivated and able to deal effectively with customers throughout Europe and find solutions to their problems.

Understanding of microprocessor technology essential and applicants should have 3-5 years related experience. Occasional travel required.

Provide C.V. and salary history to:

Director, Sales & Marketing
Bealve International (UK) Ltd
Index House
Ascot SL5 7EU
Berkshire

PUZZLE ANSWER

TOTAL area involved is 10,270, which breaks down to 2x5x13x79=79x130 or 65x158. However, 65 cannot be arrived at as a possible rectangle-side, so 79x130 must be the required dimensions.
Considering this rectangle as lying on its side, the tiles are positioned as follows: 41 44 45 top row — 38 3 (below 41), 35 12 (below 3 and 44), 11 34 (below 45) — 23 (below 12 and 11).
